Section I – INTRODUCTION

A. RISK FACTORS

STANDARD RISK FACTORS

- Mutual Funds and securities investments are subject to market risks and there can be no assurance or guarantee that the objectives of the Scheme will be achieved.
- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down depending on the various factors and forces affecting capital markets and money markets.
- Past performance of the Sponsor / AMC / Mutual Fund does not guarantee future performance of the Scheme and may not necessarily provide a basis of comparison with other investments.
- Aditya Birla Sun Life Fixed Maturity Plan - Series UQ (92 days) is the name of the Scheme and does not, in any manner, indicate either the quality of the Scheme or its future prospects or returns.
- The Sponsors are not responsible or liable for any loss resulting from the operation of the Schemes beyond the initial contribution of Rs. 1,00,000 made by it towards setting up the Fund.
- The present scheme is not a guaranteed or assured return scheme.

SCHEME SPECIFIC RISK FACTORS

RISK FACTORS ASSOCIATED WITH INVESTMENTS IN FIXED INCOME SECURITIES:

- **Price-Risk or Interest-Rate Risk:** Fixed income securities such as bonds, debentures and money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.
- **Credit Risk:** In simple terms this risk means that the issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may go down because the credit rating of an issuer goes down. It must, however, be noted that where the Scheme has invested in Government securities, there is no credit risk to that extent.
- **Liquidity or Marketability Risk:** This refers to the ease with which a security can be sold at or near to its valuation Yield-to-Maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.
- **Reinvestment Risk:** Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

- **Pre-payment Risk:** Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.
- **Concentration Risk:** The Scheme portfolio may have higher exposure to a single sector, subject to maximum of 25% of net assets as specified in this SID, depending upon availability of issuances in the market at the time of investment, resulting in higher concentration risk. Any change in government policy / business environment relevant to the sector may have an adverse impact on the portfolio.
- Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the scheme's risk may increase or decrease depending upon its investment pattern. E.g., corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds, which are AA rated, are comparatively riskier than bonds, which are AAA rated.

Risks factors associated with investments in Repo Transactions in Corporate Debt Securities:

In repo transactions, securities are sold with the seller agreeing to buy them back at later date. The repurchase price should be greater than the original sale price, the difference effectively representing interest. A repo is economically similar to a secured loan, with the buyer receiving corporate debt securities as collateral to protect against default. The Scheme may invest in repo of corporate debt securities which are subject to the following risks:

- **Counter party Risk:** This refers to the inability of the seller to meet the obligation to buy back securities at the contracted price on the contracted date. The Investment Manager will endeavour to manage counterparty risk by dealing only with counterparties, having strong credit profiles, approved by our credit risk analysis team. The exposure to each counterparty will be within the overall approved credit limits. Also the counterparty risk is to an extent mitigated by taking collateral equivalent in value to the transaction after knocking off a minimum haircut on the intrinsic value of the collateral. In the event of default by the repo counterparty, the scheme shall have recourse to the corporate debt securities.
- **Collateral Risk:** Collateral risk arises when the market value of the securities is inadequate to meet the repo obligations. This risk is mitigated by restricting participation in repo transactions only in AA or equivalent and above rated money market and corporate debt securities. Any rating downgrade will tantamount to either an early termination of the repo agreement or a call for fresh margin to meet the minimum haircut requirement. In addition, the Investment manager may apply a higher haircut on the underlying security than mentioned above to adjust for the illiquidity and interest rate risk on the underlying instrument. The adequacy of the collateral will be monitored on a daily basis by considering the daily market value & applying the prescribed haircut. The fund manager shall then arrange for additional collateral from the counterparty, within a period of 1 business day. If the counterparty is not able to top-up either in form of cash / collateral, it shall tantamount to early termination of the repo agreement.

RISKS FACTORS ASSOCIATED WITH INVESTMENTS IN SECURITISED DEBT:

Domestic securitised debt assets would be in the nature of Mortgage Backed Securities (MBS) and Asset Backed Securities (ABS) with underlying pool of assets and receivables like Housing Loans, Auto loans and corporate loans. The Securitised Debt assets and the underlying asset classes like housing loans, Auto Loans and Corporate loans have the following risk factors.

- **Limited Recourse and Credit Risk:** Certificates issued on investment in securitised debt represent a beneficial interest in the underlying receivables and there is no obligation on the issuer, seller or the originator in that regard. Defaults on the underlying loan can adversely affect the pay outs to the investors (i.e. the Scheme) and thereby, adversely affect the NAV of the Scheme. While it is possible to repossess and sell the underlying asset, various factors can delay or prevent repossession and the price obtained on sale of such assets may be low.
- **Bankruptcy Risk:** If the originator of securitised debt instruments in which the Scheme invests is subject to bankruptcy proceedings and the court in such proceedings concludes that the sale of the assets from originator to the trust was not a 'true sale', then the Scheme could experience losses or delays in the payments due. Normally, care is taken in structuring the securitization transaction so as to minimize the risk of the sale to the trust not being construed as a 'true sale'.
- **Risk of Co-mingling:** Servicers in a securitization transaction normally deposit all payments received from the obligors into a collection account. However, there could be a time gap between collection by a servicer and depositing the same into the collection account. In this interim period, collections from the loan agreements by the servicer may not be segregated from other funds of the servicer. If the servicer fails to remit such funds due to investors, investors in the Scheme may be exposed to a potential loss.

Risks associated with Mortgage Backed Securities (MBS) - Housing Loans

- **Prepayment Risk:** The fund may receive payment of monthly payouts earlier than scheduled. Prepayments shorten the life of the instrument to an extent that cannot be fully predicted. The rate of prepayments may be influenced by a variety of economic, social and other factors.
- **Credit Risk:** Delinquencies may happen which would reduce the principal amount. Typically, MBS structures come with credit enhancement in variety of forms. If delinquencies are higher than the amount available in the credit enhancement facility than the monthly payouts to the fund would reduce. Historically, it has been observed that housing loans have lower default rates as compared to other forms of credit.
- **Liquidity Risk:** Historically the secondary market volume of securitised papers has been limited. This could limit the ability of the fund to resell them. Secondary market trades could be at a discount or premium depending upon the prevailing interest rates.
- **Conversion risk:** Conversion of loans from fixed rate to floating rate loans and vice versa could lead to a change in the expected cash flows from the loans.

Risks associated with Asset Backed Securities (ABS)-Auto Loans.

- **Prepayment Risk:** The fund may receive payment of monthly payouts earlier than scheduled. Prepayments shorten the life of the instrument to an extent that cannot be fully predicted. The rate of prepayments may be influenced by a variety of economic, social and other factors. Prepayments in auto loans is lower than housing loans as the shorter tenor of auto loans makes it economically unattractive to prepay after considering the prepayment charges.
- **Credit Risk:** Delinquencies may happen which would reduce the principal amount. Typically, ABS structures come with credit enhancement in variety of forms. If delinquencies are higher than the amount available in the credit enhancement facility than the monthly payouts to the fund would reduce. Typically auto loans carry higher risk than MBS as the value retention of the underlying asset is higher in MBS as compared to the underlying asset of ABS.
- **Liquidity Risk:** Historically the secondary market volume of securitised papers has been limited. This could limit the ability of the fund to resell them. Secondary market trades could be at a discount or premium depending upon the prevailing interest rates.
- **Conversion risk:** Conversion of loans from fixed rate to floating rate loans and vice versa could lead to a change in the expected cash flows from the loans.

Risks associated with Asset Backed Securities (ABS) - Corporate Loans

- **Credit Risk:** The fund has an exposure to the Borrower/Borrowers and servicing of the instrument depends on the credit risk of the Borrower. The value of the instrument would fluctuate depending upon the changes in the perceived level of credit risk as well as any actual default.
- **Prepayment Risk:** The Borrower may prepay the receivables prior to their respective due dates. This may result in a change in the yield and tenor for the fund.
- **Limited Liquidity and Price Risk:** Historically the secondary market volume of securitised papers has been limited. This could limit the ability of the fund to resell them. Secondary market trades could be at a discount or premium depending upon the prevailing interest rates.

RISK FACTORS ASSOCIATED WITH LISTING OF UNITS:

- Listing of units of the scheme on stock exchange(s) does not necessarily guarantee liquidity and there can be no assurance that an active secondary market for the units will develop or be maintained.
- Trading in the units of the Scheme on the Exchange may be halted because of market conditions, including any halt in the operations of Depository Participants or for reasons that in view of the Exchange Authorities or SEBI, trading in the units is suspended and / or restricted. In addition, trading in units is subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange rules of 'circuit filter'. There can be no assurance that the requirements of Stock Exchange necessary to maintain the listing of units of scheme will continue to be met or will remain unchanged
- Further, the Scheme being a close ended scheme and listed on stock exchange, as per SEBI guidelines, no redemption / repurchase / switches of units will be allowed prior to maturity under the scheme. The investors wishing to redeem their units may do so through stock exchange mode.
- The Units of the scheme may trade above or below their face value / NAV. The NAV of the scheme will fluctuate with changes in the market value of schemes holdings. The trading prices of units of the scheme will fluctuate in accordance with changes in their NAV as well as market supply and demand which may even lead the units to quote at significant premium or discount to NAV.
- There is a possibility that the unitholders find it difficult or uneconomical to liquidate their investments at any particular time. As a result, investors in the scheme must be prepared to hold the units until the maturity under the Scheme.

- Regulatory Risk: Any changes in trading regulations by the Stock Exchange or SEBI, inter alia, may also result in wider premium/ discount to the NAV of the Schemes. Although the Units are proposed to be listed on the Stock Exchange, the AMC and the Trustees will not be liable for any loss suffered by investors due to delay in listing of units of the Schemes on the Stock Exchange or due to connectivity problems with the depositories due to the occurrence of any event beyond their control.
- As the units of the scheme may be held in electronic (demat) mode through depositories, the records of the depository shall be final with respect to the number of units available to the credit of unitholder. Settlement of trades, redemption/IDCW payment, in lieu of such units held in electronic (demat) form, by the Mutual Fund will depend upon the confirmations to be received from depository(ies) on which the Mutual Fund has no control.

RISK FACTORS ASSOCIATED WITH CLOSE ENDED SCHEMES:

- A close ended Scheme endeavours to achieve the capital appreciation only at the scheduled maturity of the Scheme. However, there is no assurance that the said objective will be achieved at the scheduled maturity of the scheme and there is a risk that the capital invested may not be fully realisable upon maturity of the scheme.
- The scheme being close ended in nature does not allow redemption during the tenor of the scheme. Redemptions shall happen only at the time of maturity of the scheme, and hence returns generated by the scheme may be affected if the underlying markets are at unfavourable level at the time of maturity of the scheme.
- Investors who wish to exit/redeem before the scheduled maturity date may do so through the stock exchange mode. For the Units listed on the exchange, it is possible that the market price at which the Units are traded may be at a discount to the NAV of such Units. Hence, Unit Holders who sell their Units in a Scheme prior to maturity may not get the NAV returns.

RISKS FACTORS ASSOCIATED WITH CREATION OF SEGREGATED PORTFOLIO:

Different types of securities in which the scheme would invest carry different levels and types of risk as given in the Scheme Information Document of the scheme. In addition to the same, unitholders are requested to also note the following risks with respect to Segregated Portfolio:

Liquidity Risk: A lower level of liquidity affecting an individual security (ies) or an entire market may have an adverse bearing on the value of the Segregated Scheme's assets. This may more importantly affect the ability to sell particular securities with minimal impact cost as and when necessary to meet requirement of liquidity or to sell securities in response to triggers such as a specific economic/corporate event. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few of the investments. This may impact the NAV of the segregated portfolio and could result into potential loss to the Unit holders.

Credit risk: The scheme's risk may increase or decrease depending upon its investment pattern. E.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds, which are AA rated, are comparatively riskier than bonds, which are AAA rated. Investment in unrated securities may be riskier compared to investment in rated instruments due to non-availability of third party assessment on the repayment capability of the issuer. As the securities are unrated, an independent opinion of the rating agency on the repayment capability of the issuer will not be available. The issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may go down because the credit rating of an issuer goes down. This may impact the NAV of the segregated portfolio and resultant loss to the Unit holders.

Listing of units: Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further, trading price of units on the stock market may be significantly lower than the prevailing NAV.

RISK FACTORS ASSOCIATED WITH INVESTING IN SECURITIES WITH STRUCTURED OBLIGATIONS/CREDIT ENHANCEMENTS:

- Structured obligations such as corporate / promoter guarantee: Securities which have a structure with a guarantee from the corporate / promoter, may see an adverse effect if there are any signs of stress at the promoter / group level, even though the standalone borrowing entity's debt servicing capability and repayments may not see any material impact, from a future cash flow perspective.
- It can have liquidity risk, since the market for structured products is not very deep. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today's characteristic of the Indian fixed income market.

- If there were to be a default from this portfolio, there may be no other recourse to recovery. In simple terms this risk means that the issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity.
- The Scheme may invest in debt instruments having credit enhancements backed by equity shares/guarantees or other any assets as collateral. The profile of these issuers tends to be relatively weak and there may be a pledge of shares of a related party to enhance credit quality or guarantees provided or any other asset provided as security acceptable to lenders.
- Where equity shares are provided as collateral there is the risk of sharp price volatility of underlying securities which may lead to erosion in value of collateral which may affect the ability of the fund to enforce collateral and recover capital and interest obligations. Also, there is a possibility of guarantor going insolvent which can also impact the recovery value of exposure.
- In case of credit enhanced structures backed by equity share the liquidity of the underlying shares may be low leading to a lower recovery and a higher impact cost of liquidation. In case of other assets provided recovery value and enforce ability of asset can also be a risk factor which can lower the recovery value.

B. RISK CONTROL STRATEGIES

Investments made by the scheme would be in accordance with the investment objectives of the scheme and provisions of SEBI (MF) Regulations. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. The risk control process involves reducing risks through portfolio diversification, taking care however not to dilute returns in the process. The AMC believes that this diversification would help achieve the desired level of consistency in returns. The AMC aims to identify securities, which offer yield at lower levels of risks. With the aim of controlling risks, rigorous in-depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC.

Credit Risk

Every investment in Debt and Money Market Instruments of any issuer would be made in accordance with Credit policy as defined and established by AMC from time to time. The Credit Policy, which is reviewed and monitored on a regular basis by Investment Committee, inter alia, enumerates issuer selection process, the various parameters to be considered for setting up credit exposure limits and Credit authorisation matrix for such limits, credit monitoring process etc.

The following parameters shall be considered for selection:

- The exposure to a counter party is based on the networth of the counterparty. The fund manager would do a risk assessment of the issuer before making the investments. Further, continuous monitoring of the networth of the company is done. The risk assessment by the fund manager includes the monitoring of the following:
 - Capital Structure
 - Debt Service coverage ratio
 - Interest coverage
 - Profitability margin
 - Current ratio
- The fund managers determine the sector to which the counter party relates. The fund managers assign risk weightages to sectors and shall not invest in sectors which carry a high credit risk. The risk weightages are based upon various factors like the nature of products/services of the sector, current state and future outlook for the sector, subsidies provided to the sector and government regulations for the sector.
- The fund manager shall also check the track record of the company in terms of its financials and any defaults to its creditors.
- The fund managers shall consider the track record of the sponsor/ parent of the counterparty. It includes the financials of the sponsor/ parent company and whether the parent/sponsor has defaulted in the past.
- The fund manager can also have a call with the Management of the company as a part of its research of the company.
- The fund manager will also check for Credit Default Swaps spreads of the company in global market, if any available.

The above parameters are dependent upon the information available at the time of due diligence. The fund manager shall endeavour to include all these parameters but investors should note that these parameters are indicative and can change from time to time at the discretion of the fund manager.

Price-Risk or Interest-Rate Risk

The fund will invest in a basket of debt and money market securities maturing on or before maturity of the fund with a view to hold them till the maturity of the fund. While the interim NAV will fluctuate in response to changes in interest rates, the final NAV will be more stable. To that extent the interest rate risk will be mitigated at the maturity of the scheme.

C. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. These conditions will be complied with immediately after the close of the NFO itself i.e. at the time of allotment. In case of non-fulfillment with the condition of minimum 20 investors, the Scheme shall be wound up in accordance with Regulation 39 (2) (c) of SEBI (MF) Regulations automatically without any reference from SEBI. In case of non-fulfillment with the condition of 25% holding by a single investor on the date of allotment, the application to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the corpus collected. Consequently, such exposure over 25% limits will lead to refund within 5 Business days of the date of closure of the New Fund Offer.

Generally, for instruments issued by a non-Government entity (corporate/PSU bonds), the yield is higher than the yield on a Government Security with corresponding maturity. The difference, known as credit spread, depends on various factors including the credit rating of the entity.

Additional disclosures with respect to Investments in Securitised Debt:

1. How the risk profile of securitized debt fits into the risk appetite of the scheme?

Securitized Debt is a financial instrument (bond) whose interest and principal payments are backed by an underlying cash flow from another asset. The asset may be either a loan to a single counterparty or a pool of loans. The Scheme aim to invest in a portfolio of corporate debt securities maturing on or before the maturity of the Scheme. In this scheme the Fund manager ensures that the Scheme maturity matches the maturity of the underlying securities and as securitised debt instruments are relatively illiquid the fund manager buys these with the view to hold them till maturity. Thus, in line with the investment strategy of the Scheme and considering that there would be no intermediate redemption pressures for the Fund Manager, the Scheme may take exposure to rated Securitized Debt. Credit assessment of the underlying asset or loans is done to evaluate if it meets internal norms set by the AMC.

Investment in these instruments will help the Scheme in aiming at reasonable returns. These returns come with a certain degree of risks which are covered separately in the Scheme Information Document. Accordingly, the risk profile of the securitised debt instruments matches that of the prospective investors of this Scheme and hence can be considered in the fund universe.

2. Policy relating to originators based on nature of originator, track record, securities classified as below investment grade or default, losses in earlier securitized debt, etc.

A securitization transaction involves sale of receivables by the originator (a bank, non-banking finance company, housing finance company, or a manufacturing/service company) to a Special Purpose Vehicle (SPV), typically set up in the form of a trust. Investors are issued rated Pass Through Certificates (PTCs), the proceeds of which are paid as consideration to the originator. In this manner, the originator, by selling his loan receivables to an SPV, receives consideration from investors much before the maturity of the underlying loans. Investors are paid from the collections of the underlying loans from borrowers. Typically, the transaction is provided with a limited amount of credit enhancement (as stipulated by the rating agency for a target rating), which provides protection to investors against defaults by the underlying borrowers.

The scheme will invest in instruments of the originator only if the originator has an investment grade rating. Over and above the credit rating assigned by credit rating agencies to the originator, ABSLMF will conduct an additional evaluation on

- Previous track record on origination, servicing and performance of existing pools
- Willingness to pay, through credit enhancement facilities etc.
- Ability to pay
- Business risk assessment, wherein following factors are considered:
 - Outlook for the economy (domestic and global)
 - Outlook for the industry
 - Originator/Pool specific factors

In addition, a detailed review and assessment of rating rationale is done including interactions with the company as well as agency. For single loan PTC, credit evaluation of the underlying corporate will be carried out as with any other debt instruments.

3. Risk mitigation strategies for investments with each kind of originator

In terms of specific risks attached to securitization, each asset class would have different underlying risks, however, residential mortgages are supposed to be having lower default rates as an asset class. On the other hand, repossession and subsequent recovery of commercial vehicles and other auto assets is fairly easier and better compared to mortgages. Some of the asset classes such as personal loans, credit card

receivables etc., being unsecured credits in nature, may witness higher default rates. As regards corporate loans/receivables, depending upon the nature of the underlying security for the loan or the nature of the receivable the risks would correspondingly fluctuate. However, the credit enhancement stipulated by rating agencies for such asset class pools is typically much higher, which helps in making their overall risks comparable to other AAA rated asset classes.

The Scheme may invest in securitized debt assets. The asset may be either a loan to a single counterparty or a pool of loans. The Scheme intends to invest in securitized instruments rated by a SEBI recognized credit rating agency. In addition, some specific risk mitigation measures will include:

Limited Recourse and Credit Risk: Certificates issued on investment in securitized debt represent a beneficial interest in the underlying receivables and there is no obligation on the issuer, seller or the originator in that regard. Defaults on the underlying loan can adversely affect the pay outs to the investors (i.e. the Scheme) and thereby, adversely affect the NAV of the Scheme.

Risk Mitigation: In addition to careful scrutiny of credit profile of borrower/pool additional security in the form of adequate cash collaterals and other securities may be obtained to ensure that they all qualify for similar rating.

Bankruptcy Risk: If the originator of securitized debt instruments in which the Scheme invests is subject to bankruptcy proceedings and the court in such proceedings concludes that the sale of the assets from originator to the trust was not a 'true sale', and then the Scheme could experience losses or delays in the payments due.

Risk Mitigation: Normally, specific care is taken in structuring the securitization transaction so as to minimize the risk of the sale to the trust not being construed as a 'true sale'. It is also in the interest of the originator to demonstrate the transaction as a true sell to get the necessary revenue recognition and tax benefits.

Limited Liquidity and Price risk

Presently, secondary market for securitized papers is not very liquid. There is no assurance that a deep secondary market will develop for such securities. This could limit the ability of the investor to resell them. Even if a secondary market develops and sales were to take place, these secondary transactions may be at a discount to the initial issue price due to changes in the interest rate structure.

Risk Mitigation: Securitized debt instruments are relatively illiquid in the secondary market and hence they are generally held to maturity. The liquidity risk and HTM nature is taken into consideration at the time of analyzing the appropriateness of the securitization.

Risks due to possible prepayments: Weighted Tenor / Yield

Asset securitization is a process whereby commercial or consumer credits are packaged and sold in the form of financial instruments full prepayment of underlying loan contract may arise under any of the following circumstances;

- Obligor pays the Receivable due from him at any time prior to the scheduled maturity date of that Receivable; or
- Receivable is required to be repurchased by the Seller consequent to its inability to rectify a material misrepresentation with respect to that Receivable; or
- The Servicer recognizing a contract as a defaulted contract and hence repossessing the underlying Asset and selling the same
- In the event of prepayments, investors may be exposed to changes in tenor and yield.

Risk Mitigation: A certain amount of prepayments is assumed in the calculations at the time of purchase based on historical trends and estimates. Further a stress case estimate is calculated and additional margins are built in.

Bankruptcy of the Investor's Agent

If Investor's agent becomes subject to bankruptcy proceedings and the court in the bankruptcy proceedings concludes that the recourse of Investor's Agent to the assets/receivables is not in its capacity as agent/Trustee but in its personal capacity, then an Investor could experience losses or delays in the payments due under the swap agreement.

Risk Mitigation: All possible care is normally taken in structuring the transaction and drafting the underlying documents so as to provide that the assets/receivables if and when held by Investor's Agent is held as agent and in Trust for the Investors and shall not form part of the personal assets of Investor's Agent.

4. The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments

Framework that will be applied while evaluating investment decision relating to a pool securitization transaction:

Characteristics / Type of Pool	Mortgage Loan	Commercial Vehicle & Construction Equipment	Car	Two Wheeler	Micro Finance Pools	Personal Loans	Single Sell Downs	Others
Approx. Avg Maturity	60-120 Months	12-48 Months	12-48 Months	12-24 Months	12 Months	12-36 Months	NA	NA
Collateral Margin (incl. Cash, Guarantees, Excess Interest Spread, Subordinate Tranche)	5-20%	5-20%	5-20%	5-20%	10-30%	10-30%	NA	NA
Avg Loan to Value Ratio	< 90%	< 90%	< 90%	< 90%	NA	NA	NA	NA
Avg Seasoning of the Pool	6-12 Months	3-6 Months	3-6 Months	3-6 Months	3-12 Weeks	1-3 Months	0-3 Months	NA
Max. Single Exposure Range	3-4%	3-4%	Retail	Retail	Retail	Retail	NA	NA
Avg Single Exposure Range %	1-1.5%	1.5-2%	Retail	Retail	Retail	Retail	NA	NA

Information illustrated in the Table above, is based on the current scenario relating to Securitized Debt market and is subject to change depending upon the change in the related factors.

We endeavor to consider some of the important risk mitigating factors for securitized pool i.e.

- Average original maturity of the pool: based on different asset classes and current market practices
- Collateral margin including cash collateral and other credit enhancements
- Loan to Value Ratio
- Average seasoning of the pool, which is a key indicator of past pool performance
- Default rate distribution
- Geographical Distribution
- Maximum single exposure: Retail pools (passenger cars, 2-wheelers, Micro finance, personal loans, etc.) are generally well diversified with maximum and average single exposure limits within 1%.

As illustrated above, these factors vary for different asset classes and would be based on interactions with each originator as well as the credit rating agency.

5. Minimum retention period of the debt by originator prior to securitization

The Mutual Fund will follow the guidelines on minimum holding period requirements as laid down by SEBI and RBI from time to time.

6. Minimum retention percentage by originator of debts to be securitized

We will follow the guidelines on minimum holding period requirements as laid down by SEBI and RBI from time to time.

7. The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund

Investments made by the scheme in any asset are done based on the requirements of the scheme and is in accordance with the investment policy. All Investments are made entirely at an arm's length basis with no consideration of any existing / consequent investments by any party related to the transaction (originator, issuer, borrower etc.). Investments made in Securitized debt are made as per the Investment pattern of the Scheme and are done after detailed analysis of the underlying asset. There might be instances of Originator /obligor investing in the same scheme but both the transactions are at arm's length and avoid any conflict of interest. In addition to internal controls in the fixed income investment process, there is regular monitoring by the compliance team, risk management group, and internal review teams. Normally the issuer who is securitizing instrument is in need of money and is unlikely to have long term surplus to invest in mutual fund scheme.

8. In general, the resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt

The risk assessment process for securitized debt, as detailed in the preceding paragraphs, is same as any other credit. The investments in securitized debt are done after appropriate research by credit analyst. The ratings are monitored for any movement. The entire securitized portfolio is published in the fact sheet and disclosed in the web site for public consumption with details of underlying exposure and originator.

Investment Process and Recording of Investment Decisions

The AMC through its various policies and procedures defines prudential and concentration limits to de-risk the portfolio. The investment management team is allowed full discretion to make sale and purchase decisions within the limits established. The responsibility for the investment decisions is with the fund managers and the CEO of the AMC does not have any role in the day to day decision making process. All the decisions will be recorded alongwith their justifications. The AMC and Trustee will review the performance of the scheme in their Board meetings. The performance would be compared with the performance of the benchmark index and with peer group in the industry

However, AMCs shall not charge any investment management and advisory fees on funds deployed in Tri-party Repo on Government securities or treasury bills during the NFO period. The appreciation received from investment in Tri-party Repo on Government securities or treasury bills shall be passed on to investors.

Further, in case the minimum subscription amount is not garnered by the scheme during the NFO period, the interest earned upon investment of NFO proceeds in Tri-party Repo on Government securities or treasury bills shall be returned to investors, in proportion of their investments, along-with the refund of the subscription amount.

E. INVESTMENT STRATEGY

The Investment Philosophy of the fund manager is to generate risk-adjusted returns through a research driven investment approach by investing in a portfolio of fixed income securities maturing on or before the tenure of the Scheme. Further, adequate disclosure of the segregated portfolio will also appear in all scheme related documents, in monthly and half-yearly portfolio disclosures and in the annual report of the mutual fund and the Scheme. Further, the NAV of the segregated portfolio will be declared on daily basis.

The information regarding number of segregated portfolios created in a scheme shall appear prominently under the name of the scheme at all relevant places such as SID, KIM-cum-Application Form, advertisement, AMC and AMFI websites, etc. The scheme performance required to be disclosed at various places will include the impact of creation of segregated portfolio. The scheme performance will clearly reflect the fall in NAV to the extent of the portfolio segregated due to the credit event and the said fall in NAV along with recovery (ies), if any, will be disclosed as a footnote to the scheme performance. These disclosures regarding the segregated portfolio will be carried out for a period of atleast 3 years after the investments in segregated portfolio are fully recovered/ written-off.

The investors of the segregated portfolio will be duly informed of the recovery proceedings of the investments of the segregated portfolio and status update will be provided to the investors at the time of recovery and also at the time of writing-off of the segregated securities.

Total Expense Ratio (“TER”) for the Segregated Portfolio

ABSLAMC will not charge investment and advisory fees on the segregated portfolio. However, TER (excluding the investment and advisory fees) can be charged, on a pro-rata basis only upon recovery of the investments in segregated portfolio. The TER so levied shall not exceed the simple average of such expenses (excluding the investment and advisory fees) charged on daily basis on the main portfolio (in % terms) during the period for which the segregated portfolio was in existence. The legal charges related to recovery of the investments of the segregated portfolio will be charged to the segregated portfolio in proportion to the amount of recovery. However, the same will be within the maximum TER limit as applicable to the main portfolio. The legal charges in excess of the TER limits, if any, will be borne by ABSLAMC. The costs related to segregated portfolio will in no case be charged to the main portfolio.

Monitoring by Trustees

In order to ensure timely recovery of investments of the segregated portfolio, Trustees will ensure that, the ABSLAMC puts in sincere efforts to recover the investments of the segregated portfolio. Upon recovery of money, whether partial or full, it will be immediately distributed to the investors in proportion to their holding in the segregated portfolio. Any recovery of amount of the security in the segregated portfolio even after the write off shall be distributed to the investors of the segregated portfolio. Further, an Action Taken Report (ATR) on the efforts made by the ABSLAMC to recover the investments of the segregated portfolio will be placed in every Trustee meeting till the investments are fully recovered/ written-off.

The Trustees will monitor the compliance of this circular and disclose in the half-yearly trustee reports filed with SEBI, the compliance in respect of every segregated portfolio created.

In order to avoid mis-use of segregated portfolio, trustees will ensure that there is a mechanism in place to negatively impact the performance incentives of Fund Managers, Chief Investment Officers (CIOs), etc. involved in the investment process of securities under the segregated portfolio, mirroring the existing mechanism for performance incentives of the AMC, including claw back of such amount to the segregated portfolio of the scheme.

Creation of segregated portfolio will be optional and at the discretion of ABSLAMC.

Illustration of portfolio segregation

The below illustration explains the impact of portfolio segregation on account of the credit event on the Scheme and its investors.

Value of impacted security (B)	12.90	7.10
Net Assets after segregation (C) = (A) – (B)	187.10	102.90

	Units (D)	20.000	10.000
	NAV per unit (C)/(D)	9.3548	10.2903
	Segregated Portfolio	Regular Plan	Direct Plan
	Value of impacted security segregated from Total portfolio	12.90	7.10
	Haircut @ 25%	3.23	1.77
	Net Assets after Haircut (A)	9.68	5.32
	Units (B)	20.000	10.000
	NAV per unit (A)/(B)	0.4839	0.5323

<p>Disclosure related to Risk-o-meter</p>	<p>The product labeling assigned during the NFO is based on internal assessment of the Scheme characteristics or model portfolio and the same may vary post NFO when the actual investments are made.</p> <p>The Product labeling mandated by SEBI is to provide investors an easy understanding of the risk involved in the kind of product / scheme they are investing to meet their financial goals. The Riskometer categorizes the scheme of Fund under different levels of risk based on the respective scheme's investment objective, asset allocation pattern, investment strategy and typical investment time horizon of investors. Therefore, the scheme falling under the same level of risk in the Riskometer may not be similar in nature. Investors are advised before investing to evaluate a scheme not only on the basis of the Product labeling (including the Riskometer) but also on other quantitative and qualitative factors such as performance, portfolio, fund managers, asset manager, etc. and shall also consult their financial advisers, if they are unsure about the suitability of the scheme before investing. Further, in accordance with para 17.4 of SEBI Master Circular on Mutual Funds dated May 19, 2023, Risk-o-meters shall be evaluated on a monthly basis and Mutual Funds/AMCs shall disclose the Risk-o-meters along with portfolio disclosure for their schemes on AMCs website and on AMFI website within 10 days from the close of each month. Mutual Funds shall also</p>

	disclose the risk level of schemes as on March 31 of every year, along with number of times the risk level has changed over the year, on AMCs website and AMFI website.
Disclosure of Potential Risk Class (PRC) Matrix	<p>In accordance with para 17.5 of the Master Circular for Mutual Funds dated May 19, 2023, all debt schemes are required to be classified in terms of a Potential Risk Class matrix consisting of parameters based on maximum interest rate risk (measured by Macaulay Duration (MD) of the scheme) and maximum credit risk (measured by Credit Risk Value (CRV) of the scheme). Mutual Funds are required to disclose the PRC matrix (i.e. maximum risk that a fund manager can take in a Scheme) along with the mark for the cell in which the Scheme resides on the front page of initial offering application form, SID, KIM, common application form and scheme advertisements in the manner as prescribed in the said circular. The scheme would have the flexibility to take interest rate risk and credit risk below the maximum risk as stated in the PRC matrix. Subsequently, once a PRC cell selection is done by the Scheme, any change in the positioning of the Scheme into a cell resulting in a risk (in terms of credit risk or duration risk) which is higher than the maximum risk specified for the chosen PRC cell, shall be considered as a fundamental attribute change of the Scheme in terms of Regulation 18(15A) of SEBI (Mutual Fund) Regulations, 1996.</p> <p>The Mutual Funds shall be required to inform the unitholders about the PRC classification and subsequent changes, if any, through SMS and by providing a link on their website referring to the said change.</p> <p>The Mutual Fund/ AMC shall also publish the PRC Matrix in the scheme wise Annual Reports and Abridged summary.</p>

D. COMPUTATION OF NET ASSET VALUE

The Net Asset Value (NAV) per Unit of the scheme will be computed by dividing the net assets of the scheme by the number of Units outstanding under the scheme on the valuation date. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI Regulations, or such norms as may be specified by SEBI from time to time.

NAV of Units under the scheme shall be calculated as shown below:

$$\begin{aligned} & \text{Market or Fair Value of the scheme's Investments} \\ & + \text{Current Assets (including accrued income)} \\ & - \text{Current Liabilities and Provisions (including accrued expenses)} \end{aligned}$$

$$\text{NAV (Rs.) per Unit} = \frac{\text{Market or Fair Value of the scheme's Investments} + \text{Current Assets (including accrued income)} - \text{Current Liabilities and Provisions (including accrued expenses)}}{\text{No. of Units outstanding under the scheme}}$$

The AMC will calculate and disclose the NAV of the scheme on every business day. The NAVs of the Scheme will be calculated upto 4 decimals. NAVs of the growth option and IDCW option will be different after the declaration of the first IDCW.

Illustration of computation of NAV:

If the net assets of the Scheme are Rs.10,55,34,567.12 and units outstanding are 100,00,000, then the NAV per unit will be computed as follows:
 $10,55,34,567.12 / 100,00,000 = \text{Rs. } 10.5534 \text{ p.u. (rounded off to four decimals)}$

The expense so charged shall be utilised for distribution expenses incurred for bringing inflows from such cities. However, the amount incurred as expense on account of inflows from such cities shall be credited back to the scheme in case the said inflows are redeemed within a period of one year from the date of investment.

- (b) Brokerage and transaction costs incurred for the execution of trades and included in the cost of investment, not exceeding 0.12 per cent of the value of trades of cash market transactions. The said maximum TER shall either be apportioned under various expense heads as enumerated above, without any sub limit or allocated to any of the said expense head(s) at the discretion of AMC. Also, the types of expenses charged shall be as per the SEBI (MF) Regulations

Investors should note that, all scheme related expenses including commission paid to distributors, by whatever name it may be called and in whatever manner it may be paid, will necessarily be paid from the Scheme only within the regulatory limits and not from the books of the ABSLAMC, its associate, sponsor, trustee or any other entity through any route in terms of para 10.1.12.a of the SEBI Master Circular on Mutual Funds dated May 19, 2023.

The total recurring expenses of the Scheme excluding issue or redemption expenses, whether initially borne by the Mutual Fund or by the AMC, but including the investment management and advisory fee, shall not exceed the limits as prescribed under Regulation 52 of the SEBI (MF) Regulations.

Illustration: Impact of Expense Ratio on Scheme's return:

Expense ratio, normally expressed as a percentage of Average Assets under Management, is calculated by dividing the permissible expenses under the Regulations by the average net assets.

To further illustrate the above, for the Scheme under reference, suppose an Investor invested Rs. 10,000/- under the Growth Option, the impact of expenses charged will be as under:

Particulars	Regular Plan (Rs.)	Direct Plan (Rs.)
Amount invested at the beginning of the year (A)	10,000	10,000
Value of above investment at the end of the year (before all applicable expenses) (B)	11,500	11,500
Returns before expenses (C)	1,500	1,500
Expenses other than Distribution expenses(D)	150	150
Distribution expenses(E)	50	-
Value of above investment at the end of the year (post all applicable expenses) (F)	11,300	11,350
Returns after expenses at the end of the year (G)	1300	1350
Returns (%) (post all applicable expenses) (H) $[H=(F-A)/A]$	13%	13.5%
Returns (%) (without considering any expenses) (I) $[I= (B-A)/A]$	15%	15%

Note(s):

- The purpose of the above illustration is to purely explain the impact of expense ratio charged to the Scheme and should not be construed as providing any kind of investment advice or guarantee of returns on investments.
- It is assumed that the expenses charged are evenly distributed throughout the year.
- The expenses of the Direct Option under the Scheme will be lower to the extent of the above mentioned distribution expenses/ commission. The NAVs of Direct Plan and Regular Plan will be different.
- Calculations are based on assumed NAVs, and actual returns on your investment may be more, or less.
- Any tax impact has not been considered in the above example, in view of the individual nature of the tax implications. Each investor is advised to consult his or her own financial advisor.
