c. Risk associated with investment in derivatives and different derivative strategies:

- As and when any Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the portfolio as a result of the failure of another party (usually referred as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value. Besides the price of the underlying asset, the volatility, tenor and interest rates affect the pricing of derivatives. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

- Derivative trades involve execution risks, whereby the rates seen on the screen may not be the rate at which ultimate execution takes place.
- The options buyer's risk is limited to the premium paid, while the risk of an options writer is unlimited. However, the gains of an options writer are limited to the premiums earned.
- The writer of a put option bears the risk of loss if the value of the underlying asset declines below the exercise price. The writer of a call option bears a risk of loss if the value of the underlying asset increases above the exercise price.
- Investments in index futures face the same risk as the investments in a portfolio of shares representing an index. The extent of loss is the same as in the underlying stocks.
- Risk of loss in trading futures contracts can be substantial, because of the low margin deposits required, the extremely high degree of leverage involved in futures pricing and potential high volatility of the futures markets.
- The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

d. Risks associated with Writing of Covered Call Options:

- Writing call options are highly specialized activities and entail higher than ordinary investment risks. In such investment strategy, the profits from call option writing is capped at the option premium, however, the downside depends upon the increase in value of the underlying equity shares.
- The Scheme may write covered call option only in case it has adequate number of underlying equity shares as per regulatory requirement. This would lead to setting aside a portion of investment in underlying equity shares. If covered call options are sold to the maximum extent allowed by regulatory authority, the scheme may not be able to sell the underlying equity shares immediately if the view changes to sell and exit the stock. The covered call options need to be unwound before the stock positions can be liquidated. This may lead to a loss of opportunity or can cause exit issues if the strike price at which the call option contracts have been written become illiquid. Hence, the scheme may not be able to sell the underlying equity shares, which can lead to temporary illiquidity of the underlying equity shares and result in loss of opportunity.
- The writing of covered call option would lead to loss of opportunity due to appreciation in value of the underlying equity shares. Hence, when the appreciation in equity share price is more than the option premium received the scheme would be at a loss.
- The total gross exposure related to option premium paid and received must not exceed the regulatory limits of the net assets of the scheme.

e. Risks Factors Associated with Creation of Segregated Portfolio:

Different types of securities in which the scheme would invest carry different levels and types of risk as given in the Scheme Information Document of the scheme. In addition to the same, unitholders are requested to also note the following risks with respect to Segregated Portfolio:

Liquidity Risk: A lower level of liquidity affecting an individual security (ies) or an entire market may have an adverse bearing on the value of the Segregated Scheme's assets. This may more importantly affect the ability to sell particular securities with minimal impact cost as and when necessary to meet requirement of liquidity or to sell securities in response to triggers such as a specific economic/corporate event. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few of the investments. This may impact the NAV of the segregated portfolio and could result into potential loss to the Unit holders.

Credit risk: The scheme's risk may increase or decrease depending upon its investment pattern. E.g. corporate bonds carry a higher amount of risk than Government securities. Further, even among corporate bonds, bonds, which are AA rated, are comparatively riskier than bonds, which are AAA rated. Investment in unrated securities may be riskier compared to investment in rated instruments due to non-availability of third party assessment on the repayment capability of the issuer. As the securities are unrated an independent opinion of the rating agency on the repayment capability of the issuer will not be available. The issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may go down because the credit rating of an issuer goes down. This may impact the NAV of the segregated portfolio and resultant loss to the Unit holders.

Listing of units: Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee

their liquidity. There may not be active trading of units in the stock market. Further, trading price of units on the stock market may be significantly lower than the prevailing NAV.

f. Risks associated with Securities Lending and Borrowing:

Securities Lending is lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lenders of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Schemes may not be able to sell lent out securities, which can lead to temporary illiquidity & loss of opportunity.

g. Liquidity Risk Management Framework:

In accordance with SEBI circular and AMFI guidelines (issued from time to time), the AMC has put in place the Liquidity Risk Management Framework which monitors the liquidity risk. As per the prescribed guidelines, the liquidity ratios are calculated, and liquid assets are maintained on a daily basis at scheme level for all open-ended schemes (except Overnight Fund, Gilt Fund and Gilt Fund with 10-year constant duration). These ratios address the potential liquidity risk scenarios upto 99% confidence interval. The guidelines also outline the action plan in case there is a difference between actual outcome and projected outcome. Further, the AMC monitors asset-liability mismatch requirement which addresses potential liquidity requirement over a 90-day period and relevant asset side liquidity to be maintained as prescribed by the SEBI circular.

The Scheme has adopted the SEBI circular and AMFI guidelines on Potential Risk Matrix, Risk-o-meter and Swing Pricing, where applicable.

Stress testing:

In accordance with SEBI circular and AMFI guidelines (issued from time to time), the AMC carries out stress testing for all open ended debt schemes (except overnight scheme). Stress testing covers the impact on the scheme NAV on account of interest rate risk, credit risk and liquidity risk.

h. Backstop Facility In form of Investment In Corporate Debt Market Development Fund (CDMDF):

CDMDF is set up as a scheme of the Trust registered as an Alternative Investment Fund ('AIF') in accordance with the SEBI (Alternative Investment Funds) Regulations, 2012 ("AIF Regulations"). The objective of the CDMDF is to help to develop the corporate debt market by providing backstop facility to instill confidence amongst the market participants in the corporate debt/bond market during times of market dislocation and to enhance the secondary market liquidity. In times of market dislocation, CDMDF shall purchase and hold eligible corporate debt securities from the participating investors (i.e., specified debt-oriented MF schemes) and sell as markets recover. The CDMDF will thus act as a key enabler for facilitating liquidity in the corporate debt market and to respond quickly in times of market dislocation. The trigger and period for which the backstop facility will be open shall be as decided by SEBI. Thus, this backstop facility will help fund managers of the aforementioned Schemes to better generate liquidity during market dislocation to help the schemes fulfill liquidity obligations under stress situation. In accordance with the requirement of regulation 43A of SEBI (Mutual Funds) Regulations, 2026 read with SEBI Master Circular Chapter 18 on Investment by Mutual Fund Schemes in units of Corporate Debt Market Development Fund, the aforementioned schemes shall invest 25 bps of its AUM as on December 31, 2022 in the units of the Corporate Debt Market Development Fund ('CDMDF'). An incremental contribution to CDMDF shall be made every six months to ensure 25 bps of scheme AUM is invested in units of CDMDF. However, if AUM decreases there shall be no return or redemption from CDMDF. Contribution made to CDMDF, including the appreciations on the same, if any, shall be locked-in till winding up of the CDMDF. Investments in CDMDF units shall not be considered as violation while considering maturity restriction as applicable for various purposes (including applicable Investment limits) and the calculations of Potential Risk Class (PRC) Matrix, Risk-o-meter, Stress testing and Duration for various purposes shall be done after excluding investments in units of CDMDF.

2. Special Considerations

- Changes in Government Policy in general and changes in tax benefits applicable to mutual funds may impact the returns to investors in the Scheme. As is the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Unitholder is advised to consult his / her own professional tax advisor.
 - The NAV of the scheme may be affected by changes in the general market conditions, factors and forces affecting capital market in particular, level of interest rates, various market related factors, settlement periods and transfer procedures.
 - A Unitholder may invest in the scheme and acquire a substantial portion of the scheme units. The repurchase of units by the Unitholder may have an adverse impact on the units of the schemes, because the timing of such repurchase may impact the ability of other Unit holders to repurchase their units.
 - Mutual Funds are vehicles of securities investments that are subject to market and other risks and there can be no guarantee against loss resulting from investing in the Scheme. The various factors that impact the value of the Scheme's investments include, but are not restricted to, fluctuations in the bond markets, fluctuations in interest rates, prevailing political and economic environment, changes in government policy, factors specific to the issuer of the securities, tax laws, liquidity of the underlying instruments, settlement periods, trading volumes etc.
 - The Trustee, AMC, Mutual Fund, their directors or their employees shall not be liable for any of the tax consequences that may arise, in the event that the Scheme is wound up for the reasons and in the manner provided in Statement of Additional Information (SAI) / Scheme Information Document.
 - Redemptions due to change in the fundamental attributes of the Scheme or due to any other reasons may entail tax consequences. The Trustees, the Mutual Fund, the AMC, their directors or their employees shall not be liable for any tax consequences that may arise.
 - From time to time, funds managed by the associates of the Sponsor may invest either directly or indirectly in the Scheme. The funds managed by these associates may acquire a substantial portion of the Scheme's Units and collectively constitute a major investment in the Scheme. Accordingly, Redemption of Units held by such funds may have an adverse impact on the value of the Units of the Scheme because of the timing of any such Redemption and may affect the ability of other Unit Holders to redeem their respective Units.
 - There is no guarantee or assurance on the frequency or quantum of IDCW, which shall be subject to availability of distributable surplus.
 - Growth, appreciation, IDCW, bonus, income etc. if any, referred to in this Document are subject to the tax laws and other fiscal enactments as they exist from time to time.
 - The Product labeling mandated by SEBI is to provide investors an easy understanding of the risk involved in the kind of product / scheme they are investing to meet their financial goals. The Riskometer categorizes the schemes of Fund under different levels of risk based on the respective scheme's investment objective, asset allocation pattern, investment strategy and typical investment time horizon of investors. Therefore, the schemes falling under the same level of risk in the Riskometer may not be similar in nature. Investors are advised before investing to evaluate a scheme not only on the basis of the Product labeling (including the Riskometer) but also on other quantitative and qualitative factors such as performance, portfolio, fund managers, asset manager, etc. and shall also consult their financial advisers, if they are unsure about the suitability of the scheme before investing. Further, as per para 6.16 of SEBI Master Circular on Mutual Funds dated March 20, 2026, Riskometer shall be evaluated on a monthly basis and Mutual Funds/AMCs shall disclose the Riskometer along with portfolio disclosure for their schemes on their website and on AMFI website within 10 days from the close of each month. Mutual Funds shall also disclose the risk level of schemes as on March 31 of every year, along with number of times the risk level has changed over the year, on their website and AMFI website. The AMC and its Registrar reserve the right to disclose/share investors' personal information with the following third parties:
 - Registrar, Banks and / or authorised external third parties who are involved in transaction processing, dispatches, etc., of investors' investment in the Scheme;
 - Distributors or Sub-brokers through whom applications of investors are received for the Scheme; or
 - Any other organisations for compliance with any legal or regulatory requirements or to verify the identity of investors for complying with anti-money laundering requirements.
- Account statements or financial information pertaining to the investor, if it is to be sent over the internet to the Unitholder, distributors or any other entity as indicated above, will be sent only through a secure means and / or through encrypted electronic mail.
- The Mutual Fund may disclose details of the investor's account and transactions there under to those intermediaries whose stamp appears on the application form. In addition, the Mutual Fund may disclose such details to the bankers

/ its agents, as may be necessary for the purpose of effecting payments to the investor. Further, the Mutual Fund may disclose details of the investor's account and transactions thereunder to any Regulatory/Statutory entities as per the provisions of law.

- In respect of transaction in Units of the Scheme through Stock Exchange Platform for Mutual Funds, allotment and redemption of Units on any Business Day will depend upon the order processing/ settlement by respective stock exchanges and their respective clearing corporations on which the Fund has no control.
- Investors should study this Scheme Information Document carefully in its entirety and should not construe the contents hereof as advise relating to legal, taxation, investment or any other matters. Investors may, if they wish consult their legal, tax, investment and other professional advisors to determine possible legal, tax, financial or other considerations of subscribing to or redeeming Units, before making a decision to invest/redeem Units.
- Neither this Document nor the Units have been registered in any jurisdiction. The distribution of this Document in certain jurisdictions may be restricted or totally prohibited due to registration requirements and accordingly, persons who come into possession of this Document are required to inform themselves about and to observe any such restrictions and or legal compliance requirements.
- No person has been authorized to issue any advertisement or to give any information or to make any representations other than that contained in this Document. a. Step up SIP (based on Amount)

'Step-Up SIP', is an optional, add-on feature, and an enhancement to Systematic Investment Plan (SIP) facility available under the scheme. This feature enables the investors to enhance/increase SIP installment at pre-defined intervals by a fixed amount, thus, providing the investors a simplified method of aligning SIP installments amounts with increase in earnings over the tenure of SIP.

The terms and conditions for availing the 'Step-Up SIP' shall be as follows:

1. **Option for Frequency for Step-Up SIP:**
 - a. **Half Yearly Step-Up SIP:** Under this option, the amount of investment through SIP installment shall be increased by amount chosen / designated by Investor post every 6th (sixth) SIP installment.
 - b. **Yearly Step-Up SIP:** Under this option, the amount of investment through SIP installment shall be increased by amount chosen / designated by Investor post every 12th (twelfth) SIP installment.
2. **Minimum Step-Up SIP Amount:** Rs. 100 and in multiples of Rs. 100 thereafter
3. **Default Step-Up SIP Frequency and amount:** In case the investor fails to specify any frequency or amount for Step-Up SIP, the same shall be deemed as Yearly Step-Up SIP and Rs. 100 respectively and the application form shall be processed accordingly. In case the investor fails to specify both, i.e. the frequency for Step-Up SIP and amount for Step-Up SIP, the application form may be processed as conventional SIP, subject to it being complete in all other aspects.
4. **Maximum Tenure for Step-Up SIP:** 10 year (i.e. Investors may chose / have tenure of more than 10 years under SIP, however, in such cases, feature of Step-Up SIP shall be considered and processed for a maximum of 10 years only.)
5. **Step-Up SIP shall be available for SIP Investments through NECS / Direct Debit Facility only.** Step-Up SIP shall not be available under Fast Forward SIP facility.

To Illustrate: The calculation and advantages of Step-Up SIP:

Conventional SIP	Step-Up SIP
- Fixed SIP Installment amount: Rs. 1,000/- - SIP Period: 3 years (i.e. 36 installments) - SIP date: 1st of every month	By providing/choosing the following additional details, an investor can opt for Step-Up SIP: Example: - Step-Up SIP Amount: Rs. 100/- - Step-Up SIP Frequency: Every 6 months

The impact on the total invested value under both cases can be as explained below:

SIP Tenure	Total Invested Value (in Rs.)	
	Convention	Step-Up SIP
First 6 installments	6,000	6,000
Next 6 Installments	6,000	6,600
Next 6 Installments	6,000	7,200
Next 6 Installments	6,000	7,800
Next 6 Installments	6,000	8,400
Next 6 Installments	6,000	9,000
Total Amount Invested after 3 years	36,000	45,000

The above investment simulation is purely for illustrative purposes only and shall not be deemed as guarantee/promise of minimum returns or to depict performance of any mutual fund scheme.

6. The AMC reserves the right to discontinue the SIP in case of cheque return and debit the cheque return charges to the investor's account. SIP registration will be discontinued in the following cases: (1) Where 3 (three) consecutive SIP installments are not honored or (2) In case of Fast Forward Facility, 3 (three) sequential SIP installments are not honored.
7. On an ongoing basis, the AMC would accept SIP with post-dated cheques as well NECS / Auto Debit. The cheque should be dated on or before the date of submission of the Application Form. SIP form should be submitted atleast 21 days before the first Debit through NECS/Auto Debit. Units will be allotted at the Applicable NAV on the applicable dates (or the immediately next business day, in case the date happens to fall on non-business day) subject to realization of proceeds.

***Note:** Investors can also start a SIP without any initial Investment. For availing this feature, investors need to submit the application form atleast 21 days before the first Debit date. However, in case of redemption or switch-out of Units allotted under Value STP in the Transferee Scheme, the balance instalments under Value STP will be processed for the fixed instalment amount only as specified by the Unitholder at the time of enrolment.
On the date of transfer, if the market value of the investments in the Transferee Scheme through Value STP is higher than the Investment Value for that period [(first installment amount) X (number of installments; including the current installment)], then there would be no STP on that trigger date effected from the Transferor Scheme.
- The first instalment under Value STP will be processed for the fixed instalment amount mentioned by the Unitholder at the time of enrolment.

- The maximum amount of transfer under Value STP would be limited to twice the amount per instalment mentioned in the application form at the time of enrolment.
- In case none of the frequencies have been selected or in case of any ambiguity, Monthly frequency shall be treated as the default Frequency. If STP date is not specified or in case of any ambiguity then 7th Business Day of the month will be treated as default date.
- In case the date of transfer falls on a Non-Business Day, the immediate next Business Day will be considered for the purpose of determining the applicability of NAV.
- In case of valid enrolment forms received, indicating choice of option other than the Growth Option in the Transferee Scheme, it will be deemed as the Growth Option in Transferee Scheme and processed accordingly.
- A Single Value STP Enrolment Form can be filled for transfer into only one Scheme/Plan/Option.

The price at which the Units will be Switched out of the respective Scheme/ Plan will be based on the Redemption Price, and the proceeds will be invested at the prevailing sale price for units in that scheme / plan.

(b) Intra-Scheme Switching option:

Unit holders under the Scheme have the option to Switch their Unit holdings from Growth option to IDCW option or vice-versa. No Exit Load will be charged in respect of such Intra-Scheme Switching. Such instructions may be provided in writing or by completing the transaction slip/form attached to the account statement. The switch request can be made for an amount equivalent or higher than the minimum application amount of the scheme into which the switch is made. J. Annexures

Annexure I - Detailed Valuation Policy Annexure II - Waterfall Mechanism

Annexure III- Valuation of AT-1 and Tier II bonds issued under Basel III Framework

Annexure I

The detailed valuation policy, as guided by SEBI valuation framework mentioned above, for each asset type is listed below: -

I. Equity Shares**I.1 Listed / Traded Securities:**

Any security which has been traded on any specified stock exchange and has a combined trade value of more than Rs. 500,000 or has a combined trade volume of more than 50,000 scrips during a period of thirty calendar days is considered as traded security.

- Traded securities shall be valued at the day's closing price of National stock exchange.
- When on a particular day a security has not been traded on National stock exchange the closing price on BSE shall be used for valuation.
- When a security is not traded on any stock exchange on a particular valuation day, the value at which it was traded on National Stock Exchange or Bombay Stock Exchange, as the case may be, on the earliest previous day may be used provided such date is not more than thirty calendar days prior to the valuation date.
- For Index Funds, valuation shall be done at the closing prices of the underlying index.

SEBI Guidelines:**1. Traded Securities: -**

- i. The securities shall be valued at the last quoted closing price on the stock exchange.
- ii. When the securities are traded on more than one recognized stock exchange, the securities shall be valued at the last quoted closing price on the stock exchange where the security is principally traded. It would be left to the asset management company to select the appropriate stock exchange, but the reasons for the selection should be recorded in writing. There should however be no objection for all scrips being valued at the prices quoted on the stock exchange where a majority in value of the investments is principally traded.
- iii. Once a stock exchange has been selected for valuation of a particular security, reasons for change of the exchange shall be recorded in writing by the asset management company.
- iv. When on a particular valuation day, a security has not been traded on the selected stock exchange; the value at which it is traded on another stock exchange may be used.
- v. When a security is not traded on any stock exchange on a particular valuation day, the value at which it was traded on the selected stock exchange or any other stock exchange, as the case may be, on the earliest previous day may be used provided such date is not more than thirty calendar days prior to the valuation date.

I.2 Un-Listed / Thinly Traded / Non-Traded Securities:

Any security which does not have trading volume of 50,000 scrip's and trading amount of Rs. 500,000/- in a month shall be categorized as thinly traded. When a security is not traded on any stock exchange for a period of thirty calendar days prior to the valuation date, the scrip shall be treated as a non-traded scrip.

Thinly traded / unlisted / non-traded securities shall be valued in good faith on the basis of fair valuation principles as follows:

Net Worth Value per share of the company will be derived based on the latest available audited balance sheet, not more than 9 months from close of financial year, net worth per share shall be calculated as [share capital plus free reserves (excluding revaluation reserves) minus Miscellaneous expenditure not written off or deferred revenue expenditure, intangible assets and accumulated losses] divided by Number of Paid up Shares.

Capital Earning Value per share of the company will be derived by capitalization of Earnings per Share based on the latest available balance sheet, with 25% of Average capitalization rate (P/E ratio) for the industry. As a best practice, in case of thinly traded securities, the rate (Industry P/E) to be used, shall be the latest available rate, on the date the balance sheet based valuation comes into effect. In case P/E is not available for any industry, valuation committee shall arrive at the appropriate methodology for valuation.

In case the EPS is negative, EPS value for that year shall be taken as zero for arriving at capitalized earning.

In case where the latest Balance Sheet of the company is not available within nine months from the close of the year, unless the accounting year is changed, the shares of such companies shall be valued at zero.

Average of Net Worth Value per share and Capital Earning Value per share thus derived, shall be further discounted for illiquidity by 15% to derive fair value of unlisted securities and by 10% to derive fair value of thinly traded/ non traded securities.

In case an individual security accounts for more than 5 per cent of the total assets of the scheme, an independent valuer shall be appointed for the valuation of the said security. To determine if a security accounts for more than 5 per cent. Of the total assets of the scheme, it shall be valued by the procedure above and the proportion which it bears to the total net assets of the scheme to which it belongs will be compared on the date of valuation.

The AMC after providing suitable justification to and after due approval from the Valuation Committee, may decide to value unlisted/non traded/ thinly traded securities at a price lower than the value derived using the aforesaid methodology.

For Futures and Options, the rule relating to non-traded / thinly traded does not apply.

I.3 Un-Listed / Thinly Traded Securities by way of Corporate Action:

Unlisted companies emanating by way of corporate action like de-merger etc. shall be valued based on Residual price allocation and inputs from Research Team in case of multiple resultant companies. Valuations will be considered subject to approval from the valuation committee. In the event a pre-opening session is carried out, the shares shall be valued at the price determined of the pre-opening session. In case of corporate actions where the possible re-listing of the demerged entity is envisaged or an adequate guidance is provided by the company, then no discount shall be applied to the derived price of unlisted entity.

Suitable discount will be considered if the resultant shares are of a different share class with differential voting rights and differential dividend rates. Discounts considered will be subject to approval of the Valuation Committee.

Cost allocation shall be proportionate to the derived value of resultant scrips.

Suspended Equity Securities:

In case trading in an equity security is suspended up to thirty calendar days, then the last traded price shall be considered for valuation of that security. If an equity security is suspended for more than thirty calendar days, then the AMC(s) or Trustees shall decide the valuation norms to be followed and such norms shall be documented and recorded.

SEBI Guidelines (Applicable for the above points i.e. I.2 and I.3)

Unlisted/Thinly Traded equity shares of a company shall be valued "in good faith" on the basis of the valuation principles laid down below:

a. Based on the latest available audited balance sheet, net worth shall be calculated as lower of (i) and (ii) below:

i. Net worth per share = [share capital plus free reserves (excluding revaluation reserves) minus Miscellaneous expenditure not written off or deferred revenue expenditure, intangible assets and accumulated losses] divided by Number of Paid up Shares.

ii. After taking into account the outstanding warrants and options, Net worth per share shall again be calculated and shall be = [share capital plus consideration on exercise of Option/Warrants received/receivable by the Company plus free reserves(excluding revaluation reserves) minus Miscellaneous expenditure not written off or deferred revenue expenditure, intangible assets and accumulated losses] divided by {Number of Paid up Shares plus Number of Shares that would be obtained on conversion/exercise of Outstanding Warrants and Options}

The lower of (i) and (ii) above shall be used for calculation of net worth per share and for further calculation in (c) below.

- b. Average capitalization rate (P/E ratio) for the industry based upon either BSE or NSE data (which should be followed consistently and changes, if any, noted with proper justification thereof) shall be taken and discounted by 75% i.e. only 25% of the Industry average P/E shall be taken as capitalization rate (P/E ratio). Earnings per share of the latest audited annual accounts will be considered for this purpose.
- c. The value as per the net worth value per share and the capital earning value calculated as above shall be averaged and further discounted by 15% (10% in case of thinly traded/non traded securities) for illiquidity so as to arrive at the fair value per share.

I.4 Allotment of Equity Shares on Preferential basis,:

Shares allotted on preferential basis have a lock-in of 1 year.

- a) Shares will be valued at cost up to two months from the date of purchase. If not listed within two months, will be valued as per unlisted equity shares valuation methodology after two months.
- b) Post listing of shares, they shall be valued by applying illiquidity discount on the listed price during the lock in period.
- i. If the shares are in future and option segment, 5% illiquidity discount will be applied which will be reduced by 1.25% after every 3 months.
- ii. If the shares are not part of future and option segment, 10% illiquidity discount will be applied which will be reduced by 2.5% after every 3 months.

I.5 Shares held in physical form shall be valued basis Valuation Committee approval.

I.6 Rights Offer:

Until the rights shares are traded, each rights share shall be valued as Ex- Rights price minus Rights Offer price. In case the Offer price is higher than the Ex- Rights price, rights share shall be valued at 'Nil'. Any consideration paid prior to allotment will thus result in depreciation on rights shares.

Suitable discount will be considered if the resultant shares are of a different share class with differential voting rights and differential dividend rates. Discounts so considered will be subject to approval of the Valuation Committee.

The above valuation prices to be used till the date of allotment. From the date of allotment the security shall be valued at exchange closing price.

If rights share renunciation is traded and the value and volume ratio is fulfilled, then the traded price/ renunciation price shall be used for valuation.

SEBI Guidelines

Until they are traded, the value of the "rights" shares should be calculated as: $V_r = n/m \times (P_{ex} - P_{of})$

Where

V_r = Value of rights

n = no. of rights offered

m = no. of original shares held P_{ex} = Ex-rights price

P_{of} = Rights Offer Price

Where the rights are not treated pari-passu with the existing shares, suitable adjustment should be made to the value of rights. Where it is decided not to subscribe for the rights but to renounce them and renunciations are being traded, the rights can be valued at the renunciation value.

I.7 Reduction in Face Value and Refund of Money

If a company reduces its face value and refunds the corresponding proceeds, the same shall be booked as revenue.

I.8 Partly Paid Up Shares

Traded: The closing price on the exchange shall be considered for valuation.

Non Traded/Unlisted: Uncalled liability per share shall be reduced from the value of traded fully paid equity share to derive price of partly paid shares. Suitable illiquidity discount, if deemed necessary, shall be applied with approval from Valuation Committee.

I.9 Buy Back of the Securities

If a company offers to buy back hundred percent of the shares tendered then shares will be valued at the price of buy back and ignoring the market price. Else, market price of the security will be considered for valuation till formal confirmation of acceptance of shares tendered under the buy-back scheme. Quantum of shares accepted under buy back will be accounted as a sale trade.

I.10 Warrants

Non-Traded Warrants shall be valued based on a combination of the relevant conversion ratio and conversion price. Illiquidity discount shall be considered on the same lines as for any other illiquid shares.

Option pricing models, such as Black Scholes model, may also be used for the valuation of non-traded warrants subject to the approval of Valuation Committee.

Traded Warrants (fulfilling the traded security criteria) shall be valued based on the closing price.

SEBI Guideline

In respect of warrants to subscribe for shares attached to instruments, the warrants can be valued at the value of the share which would be obtained on exercise of the warrant as reduced by the amount which would be payable on exercise of the warrant. A discount similar to the discount to be determined in respect of convertible debentures must be deducted to account for the period, which must elapse before the warrant can be exercised.

I.11 Preference Shares

If preference shares are qualified as traded, then the closing price of the day on NSE/BSE shall be considered for valuation. NSE will be the primary stock exchange.

For non-traded redeemable preference shares, valuation shall be discounted value of future cash flow based on bond yield of that issuer.

Convertible preference shares shall be valued based on the underlying equity. This value shall be further discounted for illiquidity as per the policy to value illiquid shares. Traded Convertible preference shares shall be valued based on the closing price.

Price of Cumulative Convertible Preference Shares shall be derived based on the price of underlying instrument. If Cumulative Convertible Preference Shares are traded then the closing price will be considered for valuation.

I.12 Valuation of Convertible Debentures

Traded convertible Debentures (as per the traded security criteria) shall be valued based on the cum-interest traded price.

I.13 Inter-scheme transfer (IST) of Listed Equity Shares

In case of Equity Instruments IST pricing shall be done only using the screen print of the live traded price of the security from the Bloomberg terminal.

- **Futures & Options**

Market values of traded open future/option contracts shall be determined with respect to the exchange on which it is contracted originally, i.e., a future/option contracted on the National Stock Exchange (NSE) would be valued at the Settlement price of future/option on the NSE. In such a case, the price of the same future/option series on the Bombay Stock Exchange (BSE) cannot be considered for the purpose of valuation.

- **Debt & Money Market Instruments**

Traded Debt & Money Market Instruments

A money market or debt security shall be considered as traded when, on the date of valuation, there are trades (in marketable lots) in that security on any recognized Stock Exchange or there are trades reported (in marketable lots) on the trade reporting platforms of recognized stock exchanges or CCIL

Non – Traded Debt & Money Market Instruments

A money market or debt security shall be considered as non-traded when, on the date of valuation, there are no trades (in marketable lots) in such security on any recognized Stock Exchange or no trades (in marketable lots) have been reported on the trade reporting platforms of recognized stock exchanges or CCIL

1. Valuation of money market and debt securities (including unrated debt securities)

In order to avoid different prices for same security across industry, AMFI in association with CRISIL & ICRA has initiated the process of providing scrip based prices for securities and the Aggregated Price is being used for valuation as notified by SEBI vide circular dated Mar 22, 2019

In case security level prices given by valuation agencies are not available for a new security (which is currently not held by any Mutual Fund), then such security may be valued at purchase yield (weighted) on the date of allotment / purchase.

2. Valuation of Government Securities:

G-Secs, T-bills and Cash Management Bills (CMBs) will be valued based on average of prices provided by designated agencies, presently CRISIL and ICRA, irrespective of any residual maturity.

In case security level prices given by valuation agencies are not available for a new security (which is currently not held by any Mutual Fund), then such security may be valued at purchase yield (weighted) on the date of allotment / purchase.

3. Instruments which are rated below Investment Grade:

Below Investment Grade: A money market or debt security shall be classified as “below investment grade” if the long term rating of the security issued by a SEBI registered Credit Rating Agency (CRA) is below BBB- or if the short term rating of the security is below A3.

Default Grade: A money market or debt security shall be classified as “Default” if the interest and / or principal amount has not been received, on the day such amount was due or when such security has been downgraded to “Default” grade by a CRA.

Mutual Funds shall promptly inform to the valuation agencies and the CRAs, any instance of non-receipt of payment of interest and / or principal amount (part or full) in any security. All money market and debt securities which are rated below investment grade shall be valued at the price provided by designated valuation agencies.

Till such time the valuation agencies compute the valuation of money market and debt securities classified as below investment grade, such securities shall be valued on the basis of indicative haircuts provided by these agencies. These indicative haircuts shall be applied on the date of credit event i.e. migration of the security to sub-investment grade and shall continue till the valuation agencies compute the valuation price of such securities.

a) Consideration of traded price for valuation:

In case of trades during the interim period between date of credit event and receipt of valuation price from valuation agencies, such traded price has to be considered for valuation if it is lower than the price post standard haircut. The said traded price shall be considered for valuation till the valuation price is determined by the valuation agencies.

In case of trades after the valuation price is computed by the valuation agencies as referred above and where the traded price is lower than such computed price, such traded price shall be considered for the purpose of valuation and the valuation price may be revised accordingly.

The trades referred above shall be of a minimum size as determined by valuation agencies.

b) Treatment of accrued interest, future interest accrual and future recovery:

The indicative haircut that has been applied to the principal shall be applied to any accrued interest.

In case of securities classified as below investment grade but not default, interest accrual may continue with the same haircut applied to the principal. In case of securities classified as default, no further interest accrual shall be made.

The following shall be the treatment of how any future recovery shall be accounted for in terms of principal or interest:

- a. Any recovery shall first be adjusted against the outstanding interest recognized in the NAV and any balance shall be adjusted against the value of principal recognized in the NAV.
- b. Any recovery in excess of the carried value (i.e. the value recognized in NAV) shall then be applied first towards amount of interest written off and then towards amount of principal written off.

4. Valuation of other money market / debt securities, short-term deposits with banks (pending deployment)

a) TREPS and Reverse Repo (Including Corporate Bond Repo). Shall be valued at the average of the prices obtained from rating agencies. In case security level prices to be given by valuation agencies are not available for a new security (which is currently not held by any Mutual Fund), then such security may be valued at purchase yield/price on the date of allotment/purchase. Overnight Reverse Repo (Including Corporate Bond Repo) / TREPS will be valued at cost plus accruals/ amortization basis.

b) Short-term deposits with banks (pending deployment)

Investments in short-term deposits with banks (pending deployment) shall be valued on cost plus accrual basis.

5. Valuation for Instruments with options

The option embedded securities would be valued as follows:

1. Securities with call option:

The securities with call option shall be valued at the lower of the value as obtained by valuing the security to final maturity and valuing the security to call option. In case there are multiple call options, the lowest value obtained by valuing to the various call dates and valuing to the maturity date is to be taken as the value of the instrument.

2. Securities with Put option:

The securities with put option shall be valued at the higher of the value as obtained by valuing the security to final maturity and valuing the security to put option. In case there are multiple put options, the highest value obtained by valuing to the various put dates and valuing to the maturity date is to be taken as the value of the instruments.

3. Securities with both Put and Call Option:

Only securities with put / call options on the same day and having the same put and call option price, shall be deemed to mature on such put / call date and shall be valued accordingly.

In all other cases, the cash flow of each put / call option shall be evaluated and the security shall be valued on the following basis:

- a) Identify a 'Put Trigger Date', a date on which 'price to put option' is the highest when compared with price to other put options and maturity price
- b) Identify a 'Call Trigger Date', a date on which 'price to call option' is the lowest when compared with price to other call options and maturity price.
- c) In case no Put Trigger Date or Call Trigger Date ('Trigger Date') is available, then valuation would be done to maturity price. In case both Trigger Dates are available, then valuation would be done to the earliest date.

If a put option is not exercised by a Mutual Fund when exercising such put option would have been in favour of the scheme, in such cases the justification for not exercising the put option shall be provided to the Board of AMC and Trustees.

Any put option inserted subsequent to the issuance of the security shall not be considered for the purpose of valuation.

6. Treatment of Upfront Fees on Trades

- a) Upfront fees on all trades (including primary market trades), by whatever name and manner called, would be considered by the valuation agencies for the purpose of valuation of security.
- b) Details of such upfront fees shall be shared by the AMC on the trade date to the valuation agencies as part of the trade reporting to enable them to arrive at the fair valuation for that date.
- c) For the purpose of accounting, such upfront fees shall be reduced from the cost of the investment in the scheme that made the investment.
- d) In case upfront fees are received across multiple schemes, then such upfront fees shall be shared on a pro-rata basis across such schemes.

7. Changes in terms of investment:

While making any change to terms of an investment, Mutual Funds shall adhere to the following conditions:

- i. Any changes to the terms of investment, which may have an impact on valuation, shall be reported to the valuation agencies immediately.
- ii. Any extension in the maturity of a money market or debt security shall result in the security being treated as "Default", for the purpose of valuation.
- iii. If the maturity date of a money market or debt security is shortened and then subsequently extended, the security shall be treated as "Default" for the purpose of valuation.
- iv. Any put option inserted subsequent to the issuance of the security shall not be considered for the purpose of valuation and original terms of the issue will be considered for valuation.

8. Exceptions to Principles III 1 above

Under exceptional circumstances, including but not limited to the following, where the valuation price arrived at based on the above principles for any debt or money market instrument, is not reflective of Net Realizable Value in the opinion of the Valuation Committee, then the valuation price would be determined by the Committee using principles of fair valuation:

- a. Credit events affecting a company or sector
 - b. RBI actions
 - c. Valuation of covenants / collateral that impact the valuation of a security
 - d. Any action taken by a foreign central bank / government that would affect the value of a security
 - e. Change in regulations
- the detailed rationale for each instance of deviation shall be recorded by the AMC

Exceptions to Principles III 4 above - Deviations from indicative Haircuts and /or Valuation price for securities below Investment Grade

The detailed rationale for deviation from the price post haircuts or the price provided by the valuation agencies shall be recorded. All such exceptions shall be reported to the Investment Committee and to the board of directors of the AMC & the Trustee Company. Necessary documentation shall be maintained in this regard, including justification for price deviation, method adopted along with the detailed computation of the fair price etc.

9. OTC Derivatives & MLDs

All IRFs will be valued at daily settlement price on NSE or any other recognized stock exchange.

11. Inter-scheme transfer (IST) of debt and money market instruments

Transfer of securities between schemes should ensure fair treatment of investors in both schemes & due justification for the transfer shall be recorded in writing.

- A) ISTs shall take place at prices as received by Valuation agencies. If there is more than 1 price available, the Average of such prices shall be taken. Such prices should be received by the AMCs from valuation agencies within the agreed TAT as stipulated by AMFI.
- B) In case prices are not received from the agencies within the TAT then, For determining current market prices, following order shall be followed:
 - a. In case of G-Secs (including T-Bills) traded on NDS-OM, last traded yield, at the normal market lot, as at the time of IST shall be considered to derive the price.
 - b. (Eg: An IST is always done on T+0 basis, therefore the traded yield should be used to derive the T+0 price for IST valuation)
 - c. In case of other securities, where there are market trades on the date of IST, weighted average price till the time of IST shall be considered provided the market trades satisfy the following qualifying criteria :
 - d. For instruments maturing above 1 year, the traded price may be taken if there are at least two trades aggregating to face value Rs. 25 crores or more on a single platform.
 - e. For instruments maturing within 1 year, the traded price may be taken if there are at least three trades aggregating to face value of Rs. 100 crores or more on a single platform.
 - f. In case of multiple platforms reporting trades on the same day, the order of preference would be FIMMDA, followed by Exchange (NSE WDM, BSE).
 - g. In the absence of market trades on the date of IST, where AMC has traded (equivalent to a market lot, i.e. face value of Rs. 5 crores or more) in that security prior to effecting the IST, such price / derived price (in case of T+n deals) shall be used for the inter-scheme transfer.
 - h. In the absence of traded prices or qualifying trade, such transfers shall be done at previous day's closing prices.

: Investments in Mutual Fund Units (excluding Exchange Traded Fund (ETF))

As per the guidelines issued by AMFI vide letter no 1 / Valuation /16/10-11 dated December 28, 2010 for valuation of mutual fund units:

Mutual fund units listed and traded on exchanges (NSE & BSE) excluding ETFs, would be valued at closing traded price as on the valuation date. If on the valuation date, the variance between the traded price and the closing NAV exceeds 3%, mutual fund units will be valued at the closing NAV.

Unlisted Mutual fund units and listed but not traded mutual fund units would be valued at the NAV declared on the valuation date.

: Valuation of Exchange Traded Fund (ETF)

Exchange Traded Funds shall be valued at the closing price on the National Stock Exchange (NSE)/ Bombay Stock Exchange (BSE) valuation day. If not traded on the primary stock exchange, the closing price on the other stock exchange will be considered. In case of no trade on either stock exchange, earliest previous closing price shall be used provided such date is not more than thirty calendar days prior to the valuation date.

: Corporate Debt Market Development Fund

Units of Corporate Debt Market Development Fund (CDMDF) would be valued at the published NAV as on the valuation day.

: International Securities

Investments are marked to market on a daily basis and Unrealised Gain/ Loss due to currency rate movement and Unrealised Gain/ Loss due to security price movement are accounted separately.

International Equity /ADR/GDR/Depository Receipt/Depository Interest/ Mutual Fund units/ ETF :

Valuation of securities is based on the closing price as reported by Reuters/Bloomberg/any other provider for the relevant Sedol in the same order preference. For All markets closing price is of T-day. When EQUITY/ADR/GDR/Depository Receipt/Depository Interest is not traded on a particular valuation day, earliest previous closing price shall be used provided such date is not more than thirty days prior to the valuation date.

International Mutual fund units would be valued at their NAV declared on the valuation date. Investments are marked to market on a daily basis and Unrealised Gain/ Loss due to currency rate movement and Unrealised Gain/ Loss due to NAV are accounted separately.

For International ETFs, closing price of T-day will be considered for all markets. In case the ETF is not traded or not available, earliest previous closing price shall be used provided such date is not more than thirty days prior to the valuation date.

Forward positions on cross currencies are marked to market on a daily basis against INR till such date as the positions are settled. Difference between the exchange rate of the forward and the original FX rate on the contract is accounted as Realized Gain/ Loss on currency. The exchange rate available on Reuters / Bloomberg / RBI shall be used to mark to market the FX positions in the same order preference.

On valuation date, all assets and liabilities in foreign currency shall be valued in Indian Rupees at the rate available on Reuters / Bloomberg / RBI at 5.00 pm (IST) cut off, in the same order preference. In case the direct exchange rates are not available on Bloomberg/Reuter's, then cross currency with USD would be considered and converted as per INR/USD rate in Reuters / Bloomberg / RBI.

Thinly traded ADR/GDRs/Depository Receipt/Depository Interest shall be valued after considering appropriate discount for illiquidity as decided by the valuation committee. All other / thinly traded foreign securities shall be valued by AMC at fair value after considering relevant factors on case to case basis as decided by the Valuation Committee.

International Debt:

In case of securities traded by ABSLMF on a particular day, the security shall be valued at traded price or weighted average traded price in case of multiple trades on that particular day. Securities where ABSLMF has no trades shall be valued at BVAL price provided by Bloomberg with a cut-off time of 6.00 PM IST.

Exceptions

1) Price not available on Bloomberg

In case the price for a particular security is not provided by Bloomberg BVAL for any given day, the allotment price or last traded price or last valuation price, whichever is more recent, shall be used for valuation up to 5 business days. And Beyond 5 business days the valuation price would be determined by the Valuation Committee using principle of fair valuation. Necessary documentation shall be maintained in this regard, including method adopted along with the detailed computation of the fair price.

2) Price not reflective of Net realizable value

Where BVAL pricing is deemed not reflective of Net Realizable Value in the opinion of the Valuation Committee, then the valuation price would be determined by the Committee using principles of fair valuation. Additionally, the Analyst/Fund Manager shall provide necessary documentation in this regard, including justification for price deviation, method adopted for valuation along with the detailed computation/logic for arriving at the fair price etc.

III Valuation of Gold and Silver

The gold and silver acquired by the scheme in the form of standard bars are valued basis the polled spot price published by recognized stock exchange. In the event that polled prices published by recognized stock exchanges are not available on any business day, prices published by any other domestic price source using a polling methodology shall be considered or any other methodology as prescribed by SEBI.

IV Valuation of Infrastructure Investment Trust (InvITs)/ Real Estate Investment Trust (REITs) units

- Daily Closing price from Exchange (NSE- Primary, BSE- Secondary)
- Latest NAV declared by Investment managers of the trust in case the security is not traded for last 30 calendar days
- In case the fund manager / valuation committee feels the NAV declared by the trust is not representative of the fair value, the fund manager would derive the fair value along with approval from the valuation committee with supporting.

V Valuation of Exchange Traded Commodity Derivatives (ETCDs):

Exchange Traded Commodity Derivatives (ETCDs) - Futures and Options:

- ETCD contracts shall be valued at the last quoted closing price on the exchange where such contracts are listed
- On a valuation day, if last quoted closing price is not available then such ETCD contracts shall be valued at the settlement price.
- In case necessary details to value ETCDs are not available or if the prices as per above do not represent fair price, the valuation committee, in order to ensure fair valuation, will determine price, based on the available information.

Exchange Traded Commodity Derivatives (ETCDs) - Physical:

- Upon the receipt of physical stocks at the exchange accredited warehouse in the allocated location the commodity can be valued daily. The pooled physical price of the respective location is published by the respective commodity exchanges.
Example: Pooled price of Gold ex-Ahmedabad is published by 12:00 noon every day at the MCX website which can be referred for valuation of stocks lying in Ahmedabad warehouse / designated vaults under ABSL MF Schemes. These published prices will be considered for valuation

Annexure II – Waterfall Mechanism

Part A: Valuation of Money Market and Debt Securities other than G-Secs

1. Waterfall Mechanism for valuation of money market and debt securities:

The following shall be the broad sequence of the waterfall for valuation of money market and debt securities:

- i. Volume Weighted Average Yield (VWAY) of primary reissuances of the same ISIN (whether through book building or fixed price) and secondary trades in the same ISIN
- ii. VWAY of primary issuances through book building of same issuer, similar maturity (Refer Note 1 below)
- iii. VWAY of secondary trades of same issuer, similar maturity
- iv. VWAY of primary issuances through fixed price auction of same issuer, similar maturity
- v. VWAY of primary issuances through book building of similar issuer, similar maturity (Refer Note 1 below)
- vi. VWAY of secondary trades of similar issuer, similar maturity.
- vii. VWAY of primary issuance through fixed price auction of similar issuer, similar maturity
- viii. Construction of matrix (polling may also be used for matrix construction)
- ix. In case of exceptional circumstances, polling for security level valuation (Refer Note 2 below)

Note 1

Except for primary issuance through book building, polling shall be conducted to identify outlier trades. However, in case of any issuance through book building which is less than INR 100 Cr, polling shall be conducted to identify outlier trades.

Note 2

Some examples of exceptional circumstance would be stale spreads, any event/news in particular sector/issuer, rating changes, high volatility, corporate action or such other event as may be considered by valuation agencies. Here stale spreads are defined as spreads of issuer which were not reviewed/updated through trades/primary/polls in same or similar security/issuers of same/similar maturities in waterfall approach in last 6 months.

Further, the exact details and reasons for the exceptional circumstances which led to polling shall be documented and reported to AMCs. Further, a record of all such instances shall be maintained by AMCs and shall be subject to verification during SEBI inspections.

Note 3

All trades on stock exchanges and trades reported on trade reporting platforms till end of trade reporting time (excluding Inter-scheme transfers) should be considered for valuation on that day.

Note 4

It is understood that there are certain exceptional events, occurrence of which during market hours may lead to significant change in the yield of the debt securities. Hence, such exceptional events

need to be factored in while calculating the price of the securities. Thus, for the purpose of calculation of VWAP of trades and identification of outliers, on the day of such exceptional events, rather than considering whole day trades, only those trades shall be considered which have occurred post the event (on the same day).

The following events would be considered exceptional events:

- i. Monetary/ Credit Policy
- ii. Union Budget
- iii. Government Borrowing/ Auction Days
- iv. Material Statements on Sovereign Rating
- v. Issuer or Sector Specific events which have a material impact on yields
- vi. Central Government Election Days
- vii. Quarter end days

In addition to the above, valuation agencies may determine any other event as an exceptional event. All exceptional events along-with valuation carried out on such dates shall be documented with adequate justification.

2. Definition of tenure buckets for Similar Maturity

When a trade in the same ISIN has not taken place, reference should be taken to trades of either the same issuer or a similar issuer, where the residual tenure matches the tenure of the bond to be priced. However, as it may not be possible to match the exact tenure, it is proposed that tenure buckets are created and trades falling within such similar maturity be used as per table below.

Residual Tenure of Bond to be priced	Criteria for similar maturity
Upto 1 month	Calendar Weekly Bucket
Greater than 1 month to 3 months	Calendar Fortnightly Bucket
Greater than 3 months to 1 year	Calendar Monthly Bucket
Greater than 1 year to 3 years	Calendar Quarterly Bucket
Greater than 3 years	Calendar Half Yearly or Greater Bucket

In addition to the above:

- a. In case of market events, or to account for specific market nuances, valuation agencies may be permitted to vary the bucket in which the trade is matched or to split buckets to finer time periods as necessary. Such changes shall be auditable. Some examples of market events / nuances include cases where traded yields for securities with residual tenure of less than 90 days and more than 90 days are markedly different even though both may fall within the same maturity bucket, similarly for less than 30 days and more than 30 days or cases where yields for the last week v/s second last week of certain months such as calendar quarter ends can differ.
- b. In the case of illiquid/ semi liquid bonds, it is proposed that traded spreads be permitted to be used for longer maturity buckets (1 year and above). However, the yield should be adjusted to account for steepness of the yield curve across maturities.

c. The changes/ deviations mentioned in clauses a and b, above, should be documented, along with the detailed rationale for the same. Process for making any such deviations shall also be recorded. Such records shall be preserved for verification.

3. Process for determination of similar issuer

Valuation agencies shall determine similar issuers using one or a combination of the following criteria. Similar issuer do not always refer to issuers which trade at same yields, but may carry spreads amongst themselves & move in tandem or they are sensitive to specific market factor/s hence warrant review of spreads when such factors are triggered.

- i. Issuers within same sector/industry and/or
- ii. Issuers within same rating band and/or
- iii. Issuers with same parent/ within same group and/or
- iv. Issuers with debt securities having same guarantors and/or
- v. Issuers with securities having similar terms like Loan Against Shares (LAS)/ Loan Against Property (LAP)

The above criteria are stated as principles and the final determination on criteria, and whether in combination or isolation shall be determined by the valuation agencies. The criteria used for such determination should be documented along with the detailed rationale for the same in each instance. Such records shall be preserved for verification. Similar issuers which trade at same level or replicate each other's movements are used in waterfall approach for valuations. However, similar issuer may also be used just to trigger the review of spreads for other securities in the similar issuer category basis the trade/news/action in any security/ies within the similar issuer group.

4. Recognition of trades and outlier criteria

- i. Volume criteria for recognition of trades (marketable lot)

Paragraph 1.1.1.I(a) of SEBI vide circular no. SEBI/HO/IMD/DF4/CIR/P/2019/102 dated September 24, 2019 on Valuation of money market and debt securities, prescribes that the marketable lots shall be defined by AMFI, in consultation with SEBI. In this regard, marketable lot is defined as under.

The following volume criteria shall be used for recognition of trades by valuation agencies:

Parameter	Minimum Volume Criteria for marketable lot
Primary	INR 25 cr for both Bonds/NCD/CP/ CD and other money market instruments
Secondary	INR 25 cr for CP/ CD, T-Bills and other money market instruments
Secondary	INR 5 Cr for Bonds/NCO/ G-secs

Trades not meeting the minimum volume criteria i.e. the marketable lot criteria as stated above shall be ignored.

ii. Outlier criteria

It is critical to identify and disregard trades which are aberrations, do not reflect market levels and may potentially lead to mispricing of a security or group of securities. Hence, the following broad principles would be followed by valuation agencies for determining outlier criteria.

a. Outlier trades shall be classified on the basis of liquidity buckets (Liquid, Semi-liquid, Illiquid). Price discovery for liquid issuers is generally easier than that of illiquid issuers and hence a tighter pricing band as compared to illiquid issuers would be appropriate.

b. The outlier trades shall be determined basis the yield movement of the trade, over and above the yield movement of the matrix. Relative movement ensures that general market movements are accounted for in determining trades that are outliers. Hence, relative movement over and above benchmark movement shall be used to identify outlier trades.

c. Potential outlier trades which are identified through objective criteria defined above will be validated through polling from market participants. Potential outlier trades that are not validated through polling shall be ignored for the purpose of valuation.

d. The following criteria shall be used by valuation agencies in determining Outlier Trades

Liquidity Classification	Bps Criteria (Yield movement over Previous Day yield after accounting for yield movement of matrix)		
	Upto 15 days	15-30 days	Greater than 30 days
Liquid	30 bps	20 bps	10 bps
Semi-liquid	45 bps	35 bps	20 bps
Illiquid	70 bps	50 bps	35 bps

The above criteria shall be followed consistently and would be subject to review on a periodic basis by valuation agencies and any change would be carried in consultation with AMFI.

e. In order to ensure uniform process in determination of outlier trades the criteria for liquidity classification shall be as detailed below

Liquidity classification criteria - liquid, semi-liquid and illiquid definition

Valuation agencies shall use standard criteria for classifying trades as Liquid, Semi-Liquid and illiquid basis the following two criteria

- Trading Volume
- Spread over reference yield

Such criteria shall be reviewed on periodic basis in consultation with AMFI.

Trading Volume (Traded days) based criteria:

Number of unique days an issuer trades in the secondary market or issues a new security in the primary market in a calendar quarter

- Liquid $\geq 50\%$ of trade days
- Semi liquid $\geq 10\%$ to 50% trade days
- Illiquid $< 10\%$ of trade days

Spread based criteria:

Spread over the matrix shall be computed and based on thresholds defined, issuers shall be classified as liquid, semi liquid and illiquid. For bonds thresholds are defined as upto 15 bps for liquid; $> 15-75$ bps for semi-liquid; > 75 bps for illiquid. (Here, spread is computed as average spread of issuer over AAA Public Sector Undertakings/Financial Institutions/Banks matrix), For CP/ CD- upto 25 bps for liquid; $> 25-50$ bps for semiliquid; > 50 bps for illiquid. (Here, spread is computed as average spread of issuer over AI+/AAA CD Bank matrix).

The thresholds shall be periodically reviewed and updated having regard to the market.

The best classification (liquid being the best) from the above two criteria (trading volume and spread based) shall be considered as the final liquidity classification of the issuer. The above classification shall be carried out separately for money market instruments {CP/ CDs} and bonds.

5. Process for construction of spread matrix

Valuation agencies shall follow the below process in terms of calculating spreads and constructing the matrix:

Steps	Detailed Process
Step 1	Segmentation of corporates- The entire corporate sector is first categorised across following four sectors i.e. all the corporates will be catalogued under one of the below mentioned bucket: 1. Public Sector Undertakings/Financial Institutions/Banks; 2. Non-Banking Finance Companies -except Housing Finance Companies; 3. Housing Finance Companies; 4. Other Corporates

Step 2	Representative issuers - For the aforesaid 4 sectors, representative issuers (Benchmark Issuers) shall be chosen by the valuation agencies for only higher rating (i.e. "AAA" or AA+). Benchmark/Representative Issuers will be identified based on high liquidity, availability across tenure in AAA/AA+ category and having lower credit/liquidity premium. Benchmark Issuers can be single or multiple for each sector. It may not be possible to find representative issuers in the lower rated segments, however in case of any change in spread in a particular rating segment, the spreads in lower rated segments should be suitably adjusted to reflect the market conditions. In this respect, in case spreads over benchmark are widening at a better rated segment, then adjustments should be made across lower rated segments, such that compression of spreads is not seen at any step. For instance, if there is widening of spread of AA segment over the AAA benchmark, then there should not be any compression in spreads between AA and A rated segment and so on.
Step 3	Calculation of benchmark curve and calculation of spread - 1. Yield curve to be calculated for representative issuers for each sector for maturities ranging from 1 month till 20 years and above. 2. Waterfall approach as defined in Part A (1) above will be used for construction of yield curve of each sector. 3. In the event of no data related to trades/primary issuances in the securities of the representative issuer is available, polling shall be conducted from market participants 4. Yield curve for Representative Issuers will be created on daily basis for all 4 sectors. All other issuers will be pegged to the respective benchmark issuers depending on the sector, parentage and characteristics. Spread over the benchmark curve for each security is computed using latest available trades/primaries/polls for respective maturity bucket over the Benchmark Issuer. Spreads will be carried forward in case no data points in terms of trades/primaries/polls are available for any issuer and respective benchmark movement will be given
Step 4	1. The principles of VWAY, outlier trades and exceptional events shall be applicable while constructing the benchmark curve on the basis of trades/primary issuances. 2. In case of rating downgrade/credit event/change in liquidity or any other material event in Representative Issuers, new Representative Issuers will be identified. Also, in case there are two credit ratings, the lower rating to be considered. Residual tenure of the securities of representative issuers shall be used for construction of yield curve.

Part B: Valuation of G-Secs {T-Bill, Cash management bills, G-Sec and SOL}

The following is the waterfall mechanism for valuation of Government securities:

- VWAY of last one hour, subject to outlier validation
- VWAY for the day (including a two quote, not wider than 5 bps on NDSOM), subject to outlier validation
- Two quote, not wider than 5 bps on NDSOM, subject to outlier validation
- Carry forward of spreads over the benchmark
- Polling etc.

Note:

1. VWAY shall be computed from trades which meet the marketable lot criteria stated in Part A of these Guidelines.
2. Outlier criteria: Any trade deviating by more than +/- 5 bps post factoring the movement of benchmark security shall be identified as outlier. Such outlier shall be validated through polling for inclusion in valuations. If the trades are not validated, such trades shall be ignored.

Polling: A separate polling policy, which covers the detailed processes followed by the AMC in this regards, is in place.

Annexure III – Valuation of AT-1 and Tier II bonds issued under Basel III Framework

I. Deemed Residual Maturity of Bonds

The Deemed Residual Maturity for the Purpose of Calculation of valuation as well as Macaulay Duration for existing as well as new perpetual bonds issued:

Time Period	Deemed Residual Maturity (Years)
Till March 31, 2022	10
April 01, 2022 – September 31, 2022	20
October 01, 2022 – March 31, 2023	30
March 31, 2023 onwards	100

the residual maturity will always remain above the deemed residual maturity proposed above.

The Macaulay Duration is proposed to be calculated as under for Tier II bonds:

Time Period	Deemed Residual Maturity for all securities (Years)
April 01, 2021 – March 31, 2022	10 years or contractual maturity whichever is earlier
April 01, 2022 onwards	Actual Maturity

1. If the issuer does not exercise call option for any ISIN, then maturity of bonds to be considered as 100 years from the date of issuance of AT-1 bonds and contractual maturity of Tier II Bonds for all the ISINs of the said issuer.

2. If the non-exercise of call option is due to financial stress or in case of adverse news, the same must be reflected in the valuation.

II. Guidelines for Valuation

1. Form two types of ISINs:

- Benchmark ISINs (a non-benchmark ISIN can be linked to only one benchmark ISIN. Currently, SBI ISINs happen to be the benchmark ISINs across all maturities for AT-1 Bonds.)
- Non-benchmark ISINs (Will be divided into multiple groups based on similar issuer and similar maturity).
- The groups will be decided in consultation with valuation agencies. The two main criteria envisaged to be used here would be Tier 1 / Tier 2 ratings of the ISINs / Issuers, and the spread range in which the group of ISINs / Issuer's trade over the benchmark.

2. Take a look back period for trade recognition as under:

- 15 working days for benchmark ISINs
- 30 working days for non-benchmark ISINs
- This will be revised to 7 working days for benchmark ISIN and 15 working days for non-benchmark ISINs from October 01, 2021.

Note 1

- If the ISIN gets traded, the traded YTM will be taken for the purpose of valuation.
- If 1 ISIN of the issuer trades all other ISINs of issuers will be considered as traded but with necessary adjustment of spread to YTM.
- If none of the ISIN of the issuer gets traded, the trade of similar issuer in the group will be taken to valuation however with necessary adjustment of spread to YTM of similar issuer similar maturity. If none of the ISIN in a group gets traded on any particular day, an actual trade in a look back period will be seen.
- If there is an actual trade in look back period the security will be considered as traded and valued with necessary adjustment of spread to YTM. According to this valuation will be done based on the trade of issuer, trade of similar issuer and as an additional layer a look back period of is requested. It is confirmed that spread over YTM will be taken without any adjustment of modified duration to call.

Note 2

As the valuation is based on trade during the look back period, it is confirmed that a spread will be adjusted to reflect adverse news, change in credit rating, interest rate etc., which has bearing on the yield of ISIN being valued.

Note 3

If there is no actual trade of any ISIN of the issuer as well as similar issuer during look back period also then valuation will be done by taking spread over matrix and/or polling in line with the waterfall mechanism prescribed by AMFI.

Note 4

AT-1 bonds and Tier 2 bonds being different categories of bonds, the valuation of these bonds will be done separately (i.e.) ISIN of AT-1 bond traded will not mean that ISIN of Tier-2 bonds of the same issuer have also traded. However, if any issuer does not exercise call option for any ISIN, then the valuation and calculation of Macaulay Duration should be done considering maturity of 100 years from the date of issuance for AT-1 Bonds and Contractual Maturity for Tier 2 bonds, for all ISINs of the issue

It shall be mandatory to indicate clearly the percentage of allocation/share in favour of each of the nominees against their name and such allocation/share should be in whole numbers without any decimals, making a total of 100 percent. If the Investor states an equal percentage allocation among 10 nominees, the percentage allocation will be considered as 10% each. In the event of the Unitholders not indicating the percentage of allocation/share for each of the nominees, the AMC, by invoking the default option, shall settle the claim equally amongst all the nominees. Any odd lot after division / fraction of the percentage allocation shall be transferred to the first nominee mentioned in the nomination form. By provision of this facility, the AMC is not in any way attempting to grant any rights other than those granted by law to the nominee. A nomination in respect of the Units does not create an interest in the property after the death of the Unit holder. The nominee shall receive the Units only as an agent and trustee for the legal heirs or legatees, as the case may be. It is hereby clarified that the nominees under the nomination facility shall receive the assets of the deceased unit holder as a trustee on behalf of the legal heir(s) of the deceased unit holder, thereby effecting the due discharge of the AMC. Further, legal heirs of nominees shall not have the right to inherit the assets of the unit holder, if the nominee pre-deceases the unit holder and if, upon such demise of the nominee, no change is made in the nomination by the unit holder, then the assets shall be distributed to the surviving nominees on a pro rata basis as prescribed by SEBI in this regard.

Nomination made by a unitholder shall be applicable for investments in all the Schemes in the folio or account, and every new nomination for a folio or account will overwrite the existing nomination. Thus, a new nomination request will imply the simultaneous cancellation of the existing nomination and request for a fresh nomination. It is clarified that in case of joint accounts/holdings, upon the demise of one or more joint unit holder(s), the AMC shall transmit the assets held to the surviving unit holder(s) vide name deletion and the AMC shall provide the option to the surviving joint holder(s) to transmit the assets held, into another existing or new account/folio. In this regard, the surviving joint unit holders shall be entitled to continue with or change or cancel the nominations made previously. The mode of operation of the joint account shall be unaffected by the rule of survivorship.

In case there is a situation where there is a simultaneous passing away of all joint unit holders of a particular joint account, the AMC shall transmit the assets in the account or folio of the registered nominee(s) for effecting its due discharge. In case such joint holders have not opted for nomination and have not indicated any registered nominee, the AMC shall transmit the assets in the account/ folio to either: (a) the legal heir or legal representative of the youngest of the joint holders as per the rules of intestate succession; or (b) as per the Will of the latter, as the case may be, after following the procedure prescribed by SEBI and/or AMFI in this regard.

Non-individuals, including society, trust, body corporate, partnership firm, Karta of a Hindu Undivided Family, holder of Power of Attorney, cannot nominate. The nomination form cannot be signed by Power of Attorney (PoA) holders. In case of accounts/folios held by a Hindu Undivided Family, upon the death of the Karta as recorded, the new Karta as constituted under applicable law would be entitled to operate such account/ folio. In the absence of a new Karta, the AMC shall effect transmission of the account

/folio as per the dissolution deed and other criteria as may be defined by AMFI, in consultation with SEBI.

In case a folio has joint holders, all joint holders should sign the request for nomination / cancellation of nomination, even if the mode of holding is not "joint". A minor can be nominated and in that event, the name and address of the guardian of the minor nominee shall be provided by the unit holder. The Applicant is advised that, in case of a Single Holding, the Guardian to a Minor Nominee should be a person other than the Applicant.

Nomination can also be in favour of the Central Government, State Government, a local authority, any person designated by virtue of these offices or a religious or charitable trust.

The Nominee shall not be a trust (other than a religious or charitable trust), society, body corporate, partnership firm, Karta of a Hindu Undivided Family or a Power of Attorney holder. A non-resident Indian can be a Nominee, subject to the exchange controls in force, from time to time.

Nomination shall not be allowed in a folio/account held on behalf of a minor.

Nomination in respect of the units stands rescinded upon the transfer of units.

Transfer of units in favour of a Nominee shall be a valid discharge by the AMC against the legal heir.

The cancellation of nomination can be made only by those individuals who hold units on their own behalf single or jointly and who made the original nomination.

Nomination in respect of units stands rescinded upon redemption of units. On cancellation of the nomination, the nomination shall stand rescinded and the AMC shall not be under any obligation to transfer the units in favour of the Nominee.

2. ACTION TO BE TAKEN IN CASES WHERE DISTRIBUTOR(S) IS FOUND TO BE A JOINT HOLDER IN MULTIPLE FOLIOS OF UNRELATED 1st HOLDERS

The AMC shall ensure that its RTA's systems and process have built-in checks to detect cases upfront where mutual fund distributor's names have been added as 2nd or 3rd holders, without the knowledge of or consent of the concerned unit holder, by matching the PAN of the said distributor as per AMFI ARN/EUIN database and verification of other holders' details to ascertain whether the distributor is a joint holder in the folio.

In case it is found that the name of the distributor has been indicated as a holder in an unauthorized manner, the following steps shall be followed by the AMC:

- (a) AMC shall take up the matter with the concerned distributor on an urgent basis and seek a written explanation as to why his/her name has been added as the 2nd /3rd holder in such folios.
- (b) The distributor shall also be advised to obtain a written confirmation from the 1st holder (excluding in cases where the 1st holder is a relative), whether the name of the distributor has been added in the folio/s with his/her knowledge and consent and submit the same to the respective RTAs. The RTAs shall keep track of such cases and verify / validate the signature of the 1st holder on the declaration carefully.
- (c) If the 1st holder confirms in writing that he/she had not consented to adding the distributor's name in the folio as a joint holder, and wants the distributor's name to be deleted from the folio, the AMC/ RTA shall act on such requests promptly and delete the distributor's name from the folio under intimation to the 1st holder as well as the distributor.
- (d) Unless steps specified in (a), (b) and (c) have not been completed, transactions such as redemption/ change in bank mandate/transmission in such folios will be subject to enhanced due diligence to determine the genuine nature of such transaction requests.
- (e) Redemptions shall only be by way of written confirmations, with the signature in such confirmation being verified with the signature registered in the folio. No oral / email confirmation should be accepted since these alerts shall be validated, to avoid any fraudulent cases where the distributor may have added his/her name as a joint holder unauthorizedly and there could be a possibility that the email and the mobile number in such folios do not belong to the 1st holder.

Further, for such folios, the RTA shall mark the folio with a temporary 'STOP/lock' (not freeze), so that transactions in these folios are subject to enhanced scrutiny and due diligence. AMC/RTA to send a suitable intimation to the concerned unitholders for information in all such cases. AMC/RTA shall re-verify the registered bank account in respect of the folios by scrutinising the cancelled cheque (where applicable) afresh to ascertain whether the distributor is a joint holder in the bank account and also re-validate the bank account via penny drop / IMPS transaction afresh, using PAN-based validation, so as to confirm that the registered bank account belongs to the 1st holder only and whether the distributor is a joint holder in the bank account. If the distributor is found to be the joint holder in the registered bank account as well, it implies / will be deemed that the name of the distributor has been added in the folio/s with the knowledge and consent of the first holder, and no action need to be taken in respect such folios.

In case any death claim / application for transmission of units is received in respect of such folios, the AMC/ RTA should exercise enhanced diligence and due caution, to make sure that the claim is settled in favour of genuine beneficiary and to make sure that the distributor does not misuse his/her position as joint holder to get the transmission of units unduly transmitted in his/her name. Further, with respect to the action to be taken by the AMC against the errant distributor(s):

- (a) trail commission of the distributor is to be withheld.
- (b) AMC may dis-empanel the distributor and report the matter to AMFI with complete details, including a recommendation for suspension/termination of the distributor's AMFI registration with reasons/justification.

3. DURATION OF THE SCHEME

I. In case of close-ended schemes:

- Close-ended schemes shall stand finally terminated on the maturity date and the outstanding units of the unitholders shall be repurchased, to ensure full redemption at the end of the maturity period.
- Besides receiving the repurchase proceeds based on the repurchase price, no further benefit of any kind, either by way of increase in repurchase value or by way of income for any subsequent period, shall accrue. However, the fund reserves the right to extend the scheme beyond its redemption date, with the prior approval of SEBI and in accordance with the Regulations. In such an event, the unitholder shall be given an option to either sell back the units to the fund or to continue in the scheme. The fund can also give the unitholder an option to switch the repurchase proceeds into any other eligible scheme of the mutual fund launched or in operation at that time.
- The extension of the period of the scheme beyond the final redemption date/s or rollover of the scheme shall be in accordance with the MF Regulations.
- Mutual Fund may convert the scheme into an open-ended scheme, subject to approval from SEBI, in accordance with the MF Regulations.

- II. In case of open-ended schemes, the duration of the Scheme is perpetual, unless wound up in accordance with the MF Regulations.

Winding up

A close-ended scheme shall be wound up by redemption of the units on the expiry of the duration fixed in the scheme, unless it is rolled over for a further period as permitted under MF Regulations.

Schemes of the Mutual Fund, including close-ended schemes proposed to be wound up before the expiry of its fixed duration, shall be wound up:

- a. on the occurrence of any event which, in the opinion of the Trustee Company, requires the Scheme to be wound up; or
- b. If seventy five percent of the Unit holders of the Scheme pass a resolution that the Scheme be wound up; or
- c. If SEBI directs the Scheme to be wound up in the interest of the Unit holders.

Where a Scheme is to be wound up pursuant to the above, the Trustee Company shall give notice within one day, disclosing the circumstances leading to the winding up of the scheme:

- to SEBI; and
- in two daily newspapers having circulation all over India and also in a vernacular newspaper circulating at the place where the Mutual Fund is established.

Provided that where a scheme is to be wound up as per a. above, the Trustee Company will obtain consent of the unit holders participating in the voting by simple majority on the basis of

one vote per unit and publish the results of voting within 45 calendar days from the publication of notice.

Provided further that in case the Trustee Company fails to obtain the required consent of the unitholders, the scheme shall be reopened for business activities with effect from the second business day after publication of results of the voting.

Effect of Winding Up

On and from the date of the publication of the notice as stated above, the Trustee Company or the AMC as the case maybe, shall:

- cease to carry on any business activities in respect of the Scheme being wound up;
- cease to create or cancel Units in the Scheme;
- cease to issue or redeem Units in the Scheme;

- (ii) The Trustee Company or the person authorised above, shall proceed with the winding up as directed by SEBI or in the manner otherwise specified by SEBI for winding up of the Scheme.
- (iii) The Trustee Company or the person authorised above, shall dispose of the assets of the Scheme concerned in the best interests of the Unit holders of the Scheme.
- (iv) The proceeds realized from the sale of the assets, shall in the first instance be utilised towards discharge of all liabilities that are due and payable under the Scheme and after making appropriate provision for meeting the expenses connected with such winding up, the balance shall be paid to the Unit holders in proportion to their respective interest in the assets of the Scheme as on the date when the decision for the winding up was taken.
It is clarified that the costs related to custodian fees, audit fees and investor communication are unavoidable till the Scheme is wound-up and therefore the said costs can be considered as winding up costs for terminating the Scheme and investment and advisory fees and distribution commission shall not be considered as winding up costs for terminating the Scheme.
- (v) On the completion of the winding up, the Trustee Company shall submit to SEBI and the Unit holders, a report on the winding up containing particulars such as (i) the circumstances leading to the winding up, (ii) the steps taken for disposal of assets of the Scheme before winding up, (iii) expenses incurred in connection with the winding up of the Scheme, (iv) net assets available for distribution to the Unit holders and (v) a certificate from the Auditors of the Mutual Fund.
- (vi) Notwithstanding anything contained herein, the application of the provisions of the MF Regulations in respect of disclosures of half-yearly reports and annual reports shall continue to be applicable until the winding up is completed or the Scheme ceases to exist.
- (vii) After the receipt of report referred to above, and upon being satisfied that all measures for winding up of the Scheme have been complied with, SEBI shall record and communicate to the Trustee Company that the Scheme shall cease to exist.

Pursuant to paragraph 8.2 of the Master Circular, units of Mutual Fund schemes which are in the process of winding-up in terms of Regulation 36(2) of the MF Regulations shall be listed on recognized stock exchange, subject to compliance with listing formalities as stipulated by the stock exchange. Further, pursuant to listing, trading on stock exchange mechanism will not be mandatory for investors, but an optional channel to exit such Schemes.

REDEMPTION OF UNITS

The Units can be repurchased/redeemed (i.e., sold back to the Mutual Fund) or switched-out on every business day, at the Applicable NAV subject to payment of exit load, if any and lock-in period, if any. In case of redemption of units, the AMC shall use two-factor authentication (for online transactions) and signature method (for offline transactions), for the purpose of authentication. For demat units, the process of authentication as specified by the depository shall be followed.

The redemption or repurchase proceeds shall be dispatched to the unitholders within three working days from the date of redemption or repurchase. For schemes investing at least 80% of total assets in permissible overseas investments (as per paragraph 13.11.1 of the Master Circular), the transfer of redemption or repurchase proceeds to the unitholders shall be made within five working days from the date of redemption or repurchase. The list of exceptional situations and additional timelines for making redemption payment, as specified by AMFI, shall be adhered to by the AMC.

In case of a delay in transferring the redemption proceeds within 3 (three) working days or transfer of IDCW within 7 (seven) working days, an interest for the period of delay in transfer of redemption or repurchase or IDCW at the rate of 15% per annum along with the proceeds of redemption/ dividend shall be payable to unitholders by the AMC.

The Units so repurchased shall not be reissued. Redemption requests can be made in amounts/Units. The Redemption / Switch-out request can be made by way of a written request on a pre-printed form or by using the relevant tear off section of the Transaction Slip, which should be submitted at / may be sent by mail to any of the ISCs.

In case the Units are held in the names of more than one Unit holder, where the mode of holding is specified as "Joint", redemption requests will have to be signed by all the joint holders. However, in cases of holding specified as 'Anyone or Survivor', any of the Unit holders will have the power to make a Redemption request, without it being necessary for all the Unit holders to sign. However, in all cases, the Redemption proceeds will be paid only to the first-named holder.

In case an investor has purchased Units of a scheme of Aditya Birla Sun Life Mutual Fund on more than one Business Day (either during the New Fund Offer Period, or on an ongoing basis), the Units purchased prior in time will be redeemed/switched-out first. Thus, in case a valid application for redemption/switch-out is made by the investor, those Units of the scheme which have been held for the longest period of time will be redeemed/switched-out first, i.e., on a First-in-First-Out basis.

The Redemption would be permitted to the extent of a clear credit balance in the Unit holder's account. The Redemption request can be made by specifying the rupee amount or by specifying the number of Units to be redeemed. If a Redemption request is for both a specified rupee amount and a specified number of Units, the specified number of Units will be considered the definitive request. If only the Redemption amount is specified by the Unit holder, the AMC will divide the Redemption amount so specified by the Redemption Price to arrive at the number of Units. The request for Redemption of Units could also be in fractions, up to three decimal places. However, in the case of units held in electronic (demat) mode, the redemption request can be given only in the number of Units. Also, Switch transactions are currently not available in case of units held in electronic (demat) mode. The minimum amount of Redemption may be changed in the future by the AMC. If the balance in the account of the Unit holder does not cover the amount of the Redemption request, then the Mutual Fund is authorised to close the account of the Unit holder and send the entire such (lesser) balance to the Unit holder.

In accordance with the ELSS Guidelines, unitholders of Aditya Birla Sun Life Tax Relief '96 and Aditya Birla Sun Life Tax Plan can redeem/ switch-out their Units at the Redemption Price only after the expiry of three years from the date of allotment of Units. It may, however, be noted that in the event of death of the Unit holder, the nominee or legal heir, (subject to production of requisite documentary evidence to the satisfaction of the AMC) as the case may be, shall be able to redeem the investment only after the completion of one year or any time thereafter, from the date of allotment of the Units to the deceased Unit Holder.

Redemption Price

Redemption Price will be calculated on the basis of the applicable NAV and exit load. The Redemption Price per Unit will be calculated using the following formula:

Redemption Price = Applicable NAV * (1 - Exit Load, if any)

Example of Calculation of Redemption Price:

If the Applicable NAV is Rs. 10.00; Exit / Redemption Load is 2 percent, then the Redemption Price will be calculated as follows:

= Rs. 10.00 * (1-0.02)

= Rs. 10.00 * (0.98)

= Rs. 9.80

Payment of Redemption Proceeds

- (a) For Investors having a bank account with a bank with whom the AMC would have an arrangement from time to time.

Unit holders having a bank account with certain banks with whom the Mutual Fund would have an arrangement from time to time may avail the facility of Direct Credit to their account for Redemption of the Units of the Scheme. In such cases the Mutual Fund will, under normal circumstances, endeavor to credit the first/sole Unit holders account with the Redemption proceeds within one Business Day of the acceptance of Redemption request.

- (b) For other Investors not covered by (a) above:

Redemption proceeds will be paid by cheque and payments will be made in favour of the Unitholders registered name and bank account number.

AMC reserves the right to use any of the above modes of payment as deemed appropriate for all folios where the required information is available.

Redemption cheques, if any, will be sent to the Unitholders' addresses (or, if there is more than one holder on record, the address of the first-named holder). All Redemption payments will be made in favour of the registered holder of the Units or, if there is more than one registered holder, to the first registered holder.

2. How to convert the units held in Statement of Accounts (SoA) mode to Demat mode?

Investors holding units of mutual fund scheme in physical form (Statement of Account), may convert them easily in demat form through Depository Participants (DP). The procedure for converting mutual funds units held in Physical form into demat form is as below: -

- The holding pattern in DP (as per Client master list) should match with Physical form (SOA).
- Submit the CRF along-with the Statement of Account to your DP.
- After due verification, the DP would send the CRF to Asset Management Company (AMC) / Registrar and Transfer Agent (RTA).
- Post verification, the RTA will confirm the conversion request raised by the DP and the mutual fund units will be credited in your demat account.
- Partial allotment of units from physical to demat shall not be permitted.

3. How to convert the units held in Demat mode to Rematerialisation i.e., Physical (Statement of Account)?

1. Derivative strategies

Trading in Derivatives

SEBI has permitted Mutual Funds to participate in derivatives trading subject to observance of guidelines issued by it in this behalf. Accordingly, Mutual Funds may use various derivative products from time to time, as would be available and permitted by SEBI, in an attempt to protect the value of the portfolio and enhance Unitholders' interest.

The scheme intends to use derivatives instruments like interest rate swaps, forward rate agreements or such other derivative instruments as may be introduced from time to time for the purpose of hedging, portfolio balancing as may be permitted under SEBI (MF) Regulations.

The scheme intends to use derivative instruments stock options, stock futures, index options, index futures or other equity derivative instruments as may be introduced from time to time.

RBI has permitted Mutual Funds to participate in Interest Rate Swaps and Forward Rate Agreements. SEBI has also permitted trading of interest rate derivatives through stock exchanges. The Scheme may also trade in these instruments.

The Mutual Fund would comply with the provisions of para 13.15 of SEBI Master Circular on Mutual Funds dated March 20, 2026 such other amendments issued by SEBI from time to time while trading in derivatives.

Presently, the position limits for trading in derivatives by Mutual Fund specified in para 13.15 of SEBI Master Circular on Mutual Funds dated March 20, 2026 are as follows:

Position Limits

The position limits for Mutual Funds and its schemes shall be under:

(i) Position limit for Mutual Funds in index options contracts

- (a) The Mutual Fund position limit in all index options contracts on a particular underlying index shall be Rs 500 Cr or 15% of the total open interest of the market in index options, whichever is higher, per Stock Exchange.
- (b) This limit would be applicable on open positions in all options contracts on a particular underlying index.

(ii) Position limit for Mutual Funds in index futures contracts

- (a) The Mutual Fund position limit in all index futures contracts on a particular underlying index shall be Rs 500 Cr or 15% of the total open interest of the market in index futures, whichever is higher, per Stock Exchange.
- (b) This limit would be applicable on open positions in all futures contracts on a particular underlying index.

(iii) Additional position limit for hedging

- (a) In addition to the position limits at point (i) and (ii) above, Mutual Funds may take exposure in equity index derivatives subject to the following limits:
- (b) Short positions in index derivatives (short futures, short calls and long puts) shall not exceed (in notional value) the Mutual Fund's holding of stocks.
- (c) Long positions in index derivatives (long futures, long calls and short puts) shall not exceed (in notional value) the Mutual Fund's holding of cash, government securities, T-Bills and similar instruments.

(iv) Position limit for Mutual Funds for stock based derivative contracts

- (a) The combined futures and options position limit shall be 20% of the applicable Market Wide Position Limit (MWPL).
- (b) The MWPL and client level position limits however would remain the same as prescribed.

(v) Position limit for each scheme of a Mutual Fund

The scheme-wise position limit requirements shall be:

- (a) For stock option and stock futures contracts, the gross open position across all derivative

contracts on a particular underlying stock of a scheme of a mutual fund shall not exceed the higher of:

- (i) 1% of the free float market capitalization (in terms of number of shares). Or
 - (ii) 5% of the open interest in the derivative contracts on a particular underlying stock (in terms of number of contracts).
- (b) This position limits shall be applicable on the combined position in all derivative contracts on an underlying stock at a Stock Exchange.
- (c) For index based contracts, Mutual Funds shall disclose the total open interest held by its scheme or all schemes put together in a particular underlying index, if such open interest equals to or exceeds 15% of the open interest of all derivative contracts on that underlying index.

Exposure to Derivatives

Further, the exposure limits for trading in derivatives by Mutual Fund specified by SEBI vide para 13.15 of the SEBI Master Circular for Mutual Funds dated March 20, 2026 is as follows:

1. The cumulative gross exposure through equity & equity related instruments, debt and Money Market Instruments, derivatives, other permitted securities/assets and such other securities/assets as may be permitted by the Board from time to time subject to regulatory approvals, if any should not exceed 100% of the net assets of the Scheme.
2. The total exposure related to option premium paid must not exceed 20% of the net assets of the scheme.
3. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
4. Exposure due to hedging positions may not be included in the above mentioned limits subject to the following
 - Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
 - Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point 1
 - Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
 - The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
5. (a) Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme.
 (b) In case of participation in IRS is through over the counter transactions, the counter party has to be an entity recognized as a market maker by RBI and exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme. However, if mutual funds are transacting in IRS through an electronic trading platform offered by the Clearing Corporation of India Ltd. (CCIL) and CCIL is the central counterparty for such transactions guaranteeing settlement, the single counterparty limit of 10% shall not be applicable.
6. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point (1) above.
7. Definition of Exposure in case of derivatives positions
 Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option Premium Paid * Lot Size * Number of Contracts.

Interest Rate Swaps (IRS)

An IRS is an agreement between two parties to exchange stated interest obligations for an agreed period in respect of a notional principal amount. The most common form is a fixed to floating rate swap where

one party receives a fixed (pre-determined) rate of interest while other receives a floating (variable) rate of interest.

Forward Rate Agreement (FRA)

An FRA is basically a forward starting IRS. It is an agreement between two parties to pay or receive the difference between an agreed fixed rate (the FRA rate) and the interest rate (reference rate) prevailing on a stipulated future date, based on a notional principal amount for an agreed period. The only cash flow is the difference between the FRA rate and the reference rate. As is the case with IRS, the notional amounts are not exchanged in FRAs.

Example of a derivatives transaction

Basic Structure of a Swap

Bank A has a 6 month Rs. 10 Cr liability, currently being deployed in call. Bank B has a Rs. 10 Cr 6 month asset, being funded through call. Both banks are running an interest rate risk. To hedge this interest rate risk, they can enter into a 6 month MIBOR (Mumbai Inter Bank Offered Rate) swap. Through this swap, A will receive a fixed preagreed rate (say 7%) and pay "call" on the NSE MIBOR ("the benchmark rate"). His paying at "call" on the benchmark rate will neutralise the interest rate risk of lending an call. B will pay 7% and receive interest at the benchmark rate. His receiving of "call" on the benchmark rate will neutralise his interest rate risk arising from his call borrowing. The mechanism is as follows:

- Assume the swap is for Rs. 10 Cr March 1st to September 1st. A is a fixed rate receiver at 7% and B is a floating rate receiver at the overnight compounded rate.
- On March 1st, A and B will exchange only an agreement of having entered this swap. This documentation would be as per International Securities Dealers Association (ISDA).
- On a daily basis, the benchmark rate fixed by NSE will be tracked by them. On September 1st they will calculate the following:

A is entitled to receive interest on Rs. 10 Cr at 7% for 184 days i.e. Rs. 35.28 lakh, (this amount is known at the time the swap was concluded) and will pay the compounded benchmark rate.

B is entitled to receive daily compounded call rate for 184 days & pay 7% fixed.

On September 1st, if the total interest on the daily overnight compounded benchmark rate is higher than Rs. 35.28 lakhs, A will pay B the difference. If the daily compounded benchmark rate is lower, then B will pay A the difference.

Effectively Bank A earns interest at the rate of 7% p.a. for six months without lending money for 6 months fixed, while Bank B pays interest @ 7% p.a. for 6 months on Rs. 10 Cr, without borrowing for 6 months fixed. As per abovesaid RBI circulars, mutual funds are permitted to do Interest Rate Swaps/Forward Rate Agreements, for hedging purposes only. Accordingly, the AMC would undertake the same for similar purposes only. IRS and FRAs do also have inherent credit and settlement risks.

However, these risks are substantially reduced as they are limited to the interest streams and not the notional principal amounts.

Derivatives can be traded over the exchange or can be structured between two counter-parties. Those transacted over the exchange are called Exchange Traded derivatives whereas the other category is referred to as OTC (Over the Counter) derivatives. Some of the differences of these two derivative categories are as under:

Some of the differences of these two derivative categories are as under:

Exchange traded derivatives: These are quoted on the exchanges like any other traded asset class. The most common amongst these are the Index Futures, Index Options, Stock Futures and Options on individual equities / securities. The basic form of the futures contract is similar to that of the forward contract, a futures contract obligates its owner to purchase a specified asset at a specified exercise price on the contract maturity date. Futures are cash-settled and are traded only in organised exchanges. Exchange traded derivatives are standardised in terms of amount and delivery date. Standardisation and transparency generally ensures a liquid market together with narrower spreads. On the other hand, for delivery dates far in the future, there may be insufficient liquidity in the futures market whereas an OTC price may be available.

OTC derivatives: OTC derivatives require the two parties engaging in a derivatives transaction to come together through a process of negotiation. It is a derivative that is customised in terms of structure, amount, tenor, underlying assets, collateral etc.

The Scheme may use derivatives instruments such as Stock Index Futures, Options on indices or such other derivative instruments as may be introduced / permitted, from time to time. To illustrate, an example of a Stock Index Future is given below:

Index Futures

Benefits

- Investment in stock index futures can give exposure to the index without directly buying the individual stocks. Appreciation in index stocks can be effectively captured through investment in Stock Index Futures.
- The Fund can sell futures to hedge against market movements effectively without actually selling the stocks it holds.
The stock index futures are instruments designed to give exposure to the equity market indices. The Stock Exchange, Mumbai and the National Stock Exchange have started trading in index futures of 1, 2 and 3 month maturities. The pricing of an index future is the function of the underlying index and interest rates.

Illustration

Spot Index: 1070

1-month Nifty Future Price on day 1: 1075

Fund buys 100 lots

Each lot has a nominal value equivalent to 200 Units of the underlying index

Situation 1

Let us say that on the date of settlement, the future price = closing spot price = 1085

Profits for the Fund = $(1085 - 1075) \times 100 \text{ lots} \times 200 = \text{Rs. } 200,000$

Situation 2

Let us say that on the date of settlement, the future price = Closing spot price = 1070

Loss for the Fund = $(1070 - 1075) \times 100 \text{ lots} \times 200 = (\text{Rs. } 100,000)$

The net impact for the Fund will be in terms of the difference between the closing price of the index and cost price (ignoring margins for the sake of simplicity). Thus, it is clear from the example that the profit or loss for the Fund will be the difference of the closing price (which can be higher or lower than the purchase price) and the purchase price. The risks associated with index futures are similar to the one with equity investments. Additional risks could be on account of illiquidity and hence mispricing of the future at the time of purchase.

Buying Options

Benefits of buying a call option

Buying a call option on a stock or index gives the owner the right, but not the obligation, to buy the underlying stock / index at the designated strike price. Here the downside risks are limited to the premium paid to purchase the option.

Illustration

If the Fund buys a 1-month call option on Hindustan Lever at a strike of Rs. 190, the current market price being say Rs. 191. The Fund will have to pay a premium of say Rs. 15 to buy this call. If the stock price goes below Rs. 190 during the tenure of the call, the Fund avoids the loss it would have incurred had it straightaway bought the stock instead of the call option. The Fund gives up the premium of Rs. 15 that has to be paid in order to protect the Fund from this probable downside. If the stock goes above Rs. 190, it can exercise its right and own Hindustan Lever at a cost price of Rs. 190, thereby participating in the upside of the stock.

Benefits of buying a put option

Buying a put option on a stock originally held by the buyer gives him / her the right, but not the obligation,

to sell the underlying stock at the designated strike price. Here the downside risks are limited to the premium paid to purchase the option.

Illustration

If the Fund owns Hindustan Lever and also buys a three-month put option on Hindustan Lever at a strike of Rs. 190, the current market price being say Rs. 191. The Fund will have to pay a premium of say Rs. 12 to buy this put.

If the stock price goes below Rs. 190 during the tenure of the put, the Fund can still exercise the put and sell the stock at Rs. 190, avoiding therefore any downside on the stock below Rs. 190. The Fund gives up the fixed premium of Rs. 12 that has to be paid in order to protect the Fund from this probable downside. If the stock goes above Rs. 190, say to Rs. 220, it will not exercise its option.

The Fund will participate in the upside of the stock, since it can now sell the stock at the prevailing market price of Rs. 220.

Writing of Covered Call Options

A call option gives the holder (buyer) the right but not the obligation to buy an asset by a certain date for a certain price. Covered calls are an options strategy where a person holds a long position in an asset and writes (sells) call options on that same asset.

Benefits of writing

an option with underlying stock holding (Covered Call Writing Strategy)

The covered call strategy can be followed by the Fund Manager in order to hedge risk thereby resulting in better risk adjusted returns of the Scheme. The strategy offers the following benefits: a) Hedge against market risk - Since the fund manager sells a call option on a stock already owned by the mutual fund scheme, the downside from fall in the stock price would be lower to the extent of the premium earned from the call option. b) Generating additional returns in the form of option premium in a range bound market. Thus, a covered call strategy involves gains for unit holders in case the strategy plays out in the right direction.

Illustration - Covered Call strategy using stock call options:

Suppose, a fund manager buys equity stock of XYZ Ltd. for Rs. 1000 and simultaneously sells a call option on the same stock at a strike price of Rs. 1100. The scheme earns a premium of say, Rs. 50. Here, the fund manager does not think that the stock price will exceed Rs. 1100.

Scenario 1: Stock price exceeds Rs. 1100

The call option will get exercised and the fund manager will sell the stock to settle his obligation on the call at Rs. 1100 (earning a return of 10% on the stock purchase price). Also, the scheme has earned a premium of Rs. 50.

Net Gain - Rs. 150

Scenario 2: Stock prices stays below Rs. 1100

The call option will not get exercised and will expire worthless. The premium earned on call option will generate alpha for the scheme.

Net Gain - Rs. 50

Writing of call option (under the covered call strategy) can be undertaken subject to the following conditions:

1. The Scheme may write call options only under a covered call strategy for constituent stocks of NIFTY 50 and BSE SENSEX.
2. The total notional value (taking into account strike price as well as premium value) of call options written by the Scheme shall not exceed 15% of the total market value of equity shares held in the Scheme.
3. The total number of shares underlying the call options written shall not exceed 30% of the unencumbered shares of a particular company held in the Scheme. The unencumbered shares in a scheme shall mean shares that are not part of Securities Lending and Borrowing Mechanism (SLBM), margin or any other kind of encumbrances.
4. The Scheme may sell securities on which a call option is written under a covered call strategy subject to compliance with points 2 & 3 above. In case of any passive breach of the requirement mentioned in point 2 above, the Scheme shall have 7 trading days to rebalance the portfolio. During the rebalancing period, no additional call options can be written in the said scheme.
5. In case the scheme needs to sell securities on which a call option is written under a covered call strategy, it must ensure compliance with points 2 and 3 above while selling the securities.
6. In no case, the Scheme shall write a call option without holding the underlying equity shares. A call option can be written only on shares which are not hedged using other derivative contracts.
7. The premium received shall be within the requirements prescribed in terms of para 13.15 of SEBI Master Circular on Mutual Funds dated March 20, 2026 i.e. the total gross exposure related to option premium paid and received must not exceed 20% of the net assets of the Scheme.
8. The exposure on account of the call option written under the covered call strategy shall not be considered as exposure in terms of para 13.15 of SEBI Master Circular on Mutual Funds dated March 20, 2026.
9. The call option written shall be marked to market daily and the respective gains or losses shall be factored into the daily NAV of the Scheme until the position is closed or expired.

The Scheme intends to participate in derivatives trading within the equity component of their portfolios. Some of the strategies involving derivatives that may be used by the Investment Manager, with an aim to protect capital and enhance returns include:

Strategy Number 1: Hedging against an anticipated rise in equity prices. The scheme has a corpus of Rs. 100 Cr and has invested Rs. 65 Cr in equity and still has a cash of Rs. 15 Cr available to invest in the equity component. The Fund may buy index futures of a value of Rs. 15 Cr. The scheme may reduce the exposure to the future contract by taking an offsetting position as investments are made in the equities the scheme wants to invest in. Here, if the market rises, the scheme gains by having invested in the index futures.

Event	Gain/(Loss) from Derivatives position	Gain/(Loss) from Cash Market position	Overall Gain/(Loss) to Equity Component of Scheme
5% rise in equity price	$15 * 5\% = \text{Rs. } 0.75 \text{ Cr}$	$65 * 5\% = \text{Rs. } 3.25 \text{ Cr}$	Rs. 4 Cr
5% fall in equity price	$15 * 5\% = \text{Rs. } (0.75) \text{ Cr}$	$65 * 5\% = \text{Rs. } (3.25) \text{ Cr}$	Rs. (4) Cr

Strategy Number 2 Hedging against anticipated fall in equity prices. If the Fund has a negative view on the market and would not like to sell stocks, as the market might be weak, the scheme of the Fund can go short on index/stock futures. Later, the scheme can sell the stocks and unwind the future positions. A short position in the future would offset the long position in the underlying stocks and this can curtail potential loss in the portfolio.

For instance: The scheme has a corpus of Rs. 100 Cr and is 65% invested in equities. If the fund manager wishes to reduce the equity exposure to Rs. 30 Cr, he would sell index/stock future contracts of Rs. 35 Cr.

Event	Gain/(Loss) from Derivatives position	Gain/(Loss) from Cash Market position	Overall Gain/(Loss) to Scheme
5% fall in equity price	$35 * 5\% = \text{Rs. } 1.75 \text{ Cr.}$	$65 * 5\% = \text{Rs. } (3.25) \text{ Cr}$	Rs. (1.5) Cr
5% rise in equity price	$35 * 5\% = \text{Rs. } (1.75) \text{ Cr.}$	$65 * 5\% = \text{Rs. } 3.25 \text{ Cr}$	Rs. 1.5 Cr

Strategy Number 3: Using Index Futures to increase percentage investment in equities. This strategy will be used for the purpose of generating returns on idle cash, pending its investment in equities. The Scheme being open ended in nature upon conversion and maybe subject to daily inflows. There may be a time lag between the inflow of funds and their deployment in equities. If so desired, the AMC would be able to take immediate exposure to equities via index futures. The position in index futures may be reversed in a phased manner, as the funds are deployed in the equity markets.

The scheme has a corpus of Rs. 75 Cr and there is an inflow of Rs. 5 Cr in a day. The AMC may buy index futures contracts of a value of Rs. 5 Cr. Later as the money is deployed in the underlying equities, the value of the index futures contracts can be suitably reduced.

Equity Allocation	Event	Equity Portfolio Gain/(Loss) (Rs. in Cr)	Derivative Gain / (Loss) (Rs. in Cr)	Total Portfolio Gain / (Loss) (Rs. in Cr)
Rs. 50 Cr Equity exposure	10% rise in equity prices	5	Nil	5
Rs. 50 Cr Equity exposure + Rs. 5 Cr long position index futures	10% rise in equity prices	5	0.5	5.5
Rs. 50 Cr Equity exposure	10% fall in equity prices	(5)	Nil	(5)
Rs. 50 Cr Equity exposure + Rs. 5 Cr long position index futures	10% fall in equity prices	(5)	(0.5)	(5.5)

RISKS (For Strategies 1, 2 and 3)

- The strategy of taking a long position in index futures increases the exposure to the market. The long position is positively correlated with the market. However, there is no assurance that the stocks in the portfolio and the index behave in the same manner and thus this strategy may not provide gains perfectly aligned to the movement in the index.
- The long position will have as much loss as a gain in the underlying index. e.g. if the index appreciates by 10%, the future value rises by 10%. However, this is true only for futures contracts held till maturity. In the event that a futures contract is closed out before its expiry, the quoted price of the futures contract may be different from the gain / loss due to the movement of the underlying index. This is called the basis risk.
- While futures markets are typically more liquid than the underlying cash market, there can be no assurance that ready liquidity would exist at all points in time, for the Scheme to purchase or close out a specific futures contract

Strategy Number 4: Using Index Futures to decrease percentage investment in equities.

Similarly, in the case of a pending outflow of funds the AMC, in order to reduce exposure in equities may enter into futures contracts to sell the Index at a future date. This position can be unwound over a period in time by simultaneously selling the equity shares from the investment portfolio of the Scheme. Since the price of the futures contracts is expected to be positively correlated with the index, the value of a short position will move in the direction opposite to the movement in the index. The strategy of taking a short position in the index future would reduce the market exposure, in line with the reduced net assets, in case of a significant redemption.

Example:

Assume a scheme has an equity exposure of Rs. 50 Cr. If the Fund Manager wishes to reduce the equity exposure to Rs. 40 Cr in a short time, he would sell index futures contracts of a value of Rs. 10 Cr.

Portfolio	Event	Equity Portfolio Gain / (Loss) (Rs. in Cr)	Derivative Gain / (Loss) (Rs. in Cr)	Total Portfolio Gain / (Loss) (Rs. in Cr)
Rs. 50 Cr Equity exposure	10% fall in equity prices	(5)	Nil	(5)
Rs. 50 Cr Equity exposure + Rs. 10 Cr short position index futures	10% fall in equity prices	(5)	1	(4)
Rs. 50 Cr Equity exposure	10% rise in equity prices	5	Nil	5
Rs. 50 Cr Equity exposure + Rs. 10 Cr short position index futures	10% rise in equity prices	5	(1)	4

RISKS

- The strategy of taking a short position in index futures reduces the market exposure. The short position is negatively correlated with the market. However, there is no assurance that the stocks in the portfolio and the index behave in the same manner and thus this strategy may not be a perfect hedge.
- The short position will have as much loss as a gain in the underlying index. e.g. if the index appreciates by 10%, the future value falls by 10%. However, this is true only for futures contracts held till maturity. In the event that a futures contract is closed out before its expiry, the quoted price of the futures contract may be different from the gain / loss due to the movement of the underlying index. This is called the basis risk.
- While futures markets are typically more liquid than the underlying cash market, there can be no assurance that ready liquidity would exist at all points in time, for the Scheme to purchase or close out a specific futures contract.

Strategy Number 5: Portfolio Protection Using Index Put

The purchase of an index put option gives the scheme the option of selling the index to the writer of the put at a predetermined level of the index, called the strike price. If the index falls below this level, the scheme benefits from the rise in the value of the put option.

Similarly, as a stock hedging strategy, the purchase of a put option on the underlying stock would give the scheme the option to sell the stock to the writer of the option at the predetermined strike price. This would lead to a capping of the loss in value of a stock.

Example:

Let us assume a scheme with a corpus of Rs. 75 Cr. Let us also assume an index level of 1000. The scheme is invested 50 Cr in equities. The scheme purchases a put option on the index with a strike price of Rs.950 for an assumed cost of Rs. 50 lakhs.

The following table illustrates the portfolio returns:

% change in Index	Index Value	Equity Portfolio Value Rs. in Cr (A)	Option Value Rs. in Cr (B)	Cost of the Put Option Rs. in Cr (C)	Portfolio Value Rs. in Cr (A+B+C)	% Returns from portfolio
10	1100	55.00	0	(0.5)	54.50	9
5	1050	52.50	0	(0.5)	52.00	4

(5)	950	47.50	0	(0.5)	47.00	(6)
(10)	900	45.00	2.5	(0.5)	47.00	(6)
(15)	850	42.50	5	(0.5)	47.00	(6)

A similar put option can be purchased on any individual stock and the downside may be capped.

RISKS

- The table shows that the portfolio value will not fall below Rs. 47 Cr, while the scheme benefits from any increase in stock prices. The table assumes perfect correlation between the equity portfolio and the index. However, this may not be the case. Therefore, the minimum portfolio value cannot be assured, but the loss is expected to be lower in a portfolio with a put option on the index, as compared to a normal portfolio.
- The put option would lead to a gain based on the difference between the strike price and the index level at expiration date, if positive. However, in case the option is reversed before the expiration date, the market price received on the sale of the option may be different from the price calculated.
- While options markets can be more liquid than the underlying cash market, there can be no assurance that ready liquidity would exist at all points in time, for the scheme to purchase or close out a specific options contract.

In the case of purchase of a stock put, the strategy is a perfect hedge on the expiration date of the put option. On other days, there may be (temporary) imperfect correlation between the share price and the put option, which can potentially take the stock value below the minimum under the hedge.

Strategy Number 6: Using Alpha Strategy

The fund will seek to generate alpha by superior stock selection and removing market risks by selling appropriate index. For example, one can seek to generate positive alpha by buying an IT stock and selling Nifty IT Index future or a bank stock and selling Bank Index futures or buying a stock and selling the Nifty Index. The objective of the strategy is to generate alpha by superior stock selection and removing market risks by hedging with appropriate index.

For instance: The scheme has a corpus of Rs.100 Cr and is 65% invested in equities. Of the equity component, the fund manager has 5% exposure to. The scheme takes an offsetting position by making investments Nifty IT index future. Here, the different market scenarios are illustrated in the table below:-

Event	Gain/(Loss) from Derivatives position	Gain/(Loss) from Cash Market position	Absolute Gain
10% fall in stock price & 5% fall in index price	$3.25 * 5\% = \text{Rs. } (0.1625) \text{ Cr.}$	$3.25 * 10\% = \text{Rs. } (0.325) \text{ Cr.}$	(0.1625)
10% fall in index price & 5% fall in stock price	$3.25 * 10\% = \text{Rs. } (0.325) \text{ Cr.}$	$3.25 * 5\% = \text{Rs. } (0.1625) \text{ Cr.}$	0.1625
10% rise in stock price & 5% rise in index price	$3.25 * 5\% = \text{Rs. } 0.1625 \text{ Cr.}$	$3.25 * 10\% = \text{Rs. } 0.325 \text{ Cr.}$	0.4875
10% rise in index price & 5% rise in stock price	$3.25 * 10\% = \text{Rs. } 0.325 \text{ Cr.}$	$3.25 * 5\% = \text{Rs. } 0.1625 \text{ Cr.}$	0.4875
10% rise in index price & 10% rise in stock price	$3.25 * 10\% = \text{Rs. } 0.325 \text{ Cr.}$	$3.25 * 10\% = \text{Rs. } 0.325 \text{ Cr.}$	0.65

Risk Associated with this Strategy

- The stock selection under this strategy may under-perform the market and generate a negative alpha.
- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place.

2. Swing Pricing

Swing Pricing: Swing pricing refers to a process for adjusting a fund's net asset value (NAV) to effectively pass on transaction costs stemming from net capital activity (i.e., flows into or out of the fund) to the investors associated with that activity during the life of a fund.

During market dislocation, following Swing Pricing Framework shall be applicable:

1. The Swing Pricing Framework shall apply in case of scenarios related to net outflows from the schemes.

2. SEBI will determine 'market dislocation' either based on AMFI's recommendation or suo moto.

3. Once market dislocation is declared, SEBI will notify that swing pricing will be applicable for a specified period.

4. Mandatory swing pricing will apply for Applicable Schemes which have:

i) High or Very High risk on the risk-o-meter (as of the most recent period at the time of declaration of market dislocation); and

ii) Classify themselves in the cells A-III, B-II, B-III, C-I, C-II and C-III of Potential Risk Class (PRC) Matrix.

5. Swing Factor: Minimum Swing factor as per below matrix shall be made applicable to the above mentioned schemes and the NAV will be adjusted for the swing factor.

Swing factor

7. Impact on investors:

a. When swing pricing framework is triggered and swing factor is made applicable (for normal time or market dislocation, as the case may be), both the incoming and outgoing investors shall get NAV adjusted for swing factor.

b. All redemptions above Rs. 2 lakhs and all subscriptions would be processed at the NAV after applying the swing factor on the day Swing pricing is triggered. Redemptions below 2 lakhs would be processed at the unswung NAV i.e. Normal NAV.

8. Periodic Disclosures:

Disclosures pertaining to NAV adjusted for swing factor along with performance impact will be disclosed in the prescribed format in the SID, scheme wise Annual Reports and Abridged summary thereof and on the website when swing pricing framework becomes applicable to the schemes

Triggering Swing Pricing on re-opening of a scheme after announcement of winding – up:

- a) There may be instances where AMC, after making an announcement to wind up a scheme, decides to roll-back the decision to wind up the scheme. Such situations may trigger larger scale redemptions and hence, it would be prudent to invoke the Swing Pricing Mechanism to manage such a situation. In other words, if AMC decides to reverse its decision to wind up the scheme, it shall mandatorily invoke the Swing pricing upon re-opening a scheme for subscriptions and redemptions post such announcement.
- b) The indicative range of swing pricing for the parameter of “Re-opening of the scheme after announcement of Winding-up” shall be the same as applicable for swing pricing during normal times as stated in AMFI Best Practice Guidelines and shall be for higher of swing period as may be decided by the Board of AMC or for a minimum of 7 working days upon re-opening a scheme for subscriptions and redemptions.

3. Provisions on creation of Segregated portfolio/Side pocketing

Segregated portfolio will be created, in case of a credit event at issuer level i.e. downgrade in credit rating by a SEBI registered Credit Rating Agency (CRA), as under:

- Downgrade of a debt or money market instrument to 'below investment grade, or
- Subsequent downgrades of the said instruments from 'below investment grade, or
- Similar such downgrades of a loan rating.

In case of difference in rating by multiple CRAs, the most conservative rating will be considered. Creation of segregated portfolio will be based on issuer level credit events and as mentioned above implemented at the ISIN level.

Further, Segregated portfolio may also be created in case of unrated debt or money market instruments of an issuer that does not have any outstanding rated debt or money market instruments. However, such segregation may be done only in case of actual default of either the interest or principal amount by the issuer of such instruments. The Fund shall inform AMFI immediately about the actual default by the issuer. AMFI will disseminate the information about the actual default by the issuer to all AMCs post which the Fund may segregate the portfolio of debt or money market instruments of the said issuer.

Process of creation of segregated portfolio:

ABSLAMC will decide on creation of segregated portfolio on the day of credit event and will seek approval of ABSLTPL. Post that ABSLAMC will immediately issue a press release disclosing its intention to segregate such debt and money market instrument and its impact on the investors. ABSLAMC will also disclose in the press release that the segregation shall be subject to trustee approval. Additionally, the said press release will be prominently disclosed on the website of the AMC.

ABSLAMC will ensure that till the time the trustee approval is received, which in no case shall exceed 1 Business day from the day of credit event, the subscription and redemption in the scheme shall be suspended for processing with respect to creation of units and payment on redemptions.

The segregated portfolio shall be effective from the day of credit event, post approval of Trustee.

ABSLAMC will issue a press release immediately post approval of ABSLTPL with all relevant information pertaining to the segregated portfolio. The said information shall also be submitted to SEBI.

An e-mail or SMS will be sent to all unit holders of the concerned Scheme. The NAV of both segregated and main portfolio will be disclosed from the day of the credit event. All existing unit holders in the Scheme as on the day of the credit event shall be allotted equal number of units in the segregated portfolio as held in the main portfolio.

No redemption and subscription shall be allowed in the segregated portfolio. However, in order to facilitate exit to unit holders in segregated portfolio, ABSLAMC will enable listing of units of segregated portfolio on recognized stock exchange within 10 working days of creation of segregated portfolio and also enable transfer of such units on receipt of transfer request.

If the trustees do not approve the proposal to segregate portfolio, AMC shall issue a press release immediately informing investors of the same.

Valuation and processing of subscriptions and redemptions

The valuation will take into account the credit event and the portfolio will be valued based on the principles of fair valuation (i.e. realizable value of the assets) in terms of the relevant provisions of SEBI (Mutual Funds) Regulations, 2026 and Circular(s) issued thereunder.

All subscription and redemption requests for which NAV of the day of credit event or subsequent day is applicable will be processed as per the existing circular on applicability of NAV. However, in case of segregated portfolio, applicability of NAV will be as under:

1. Investors redeeming their units will get redemption proceeds based on the NAV of main portfolio and will continue to hold the units of segregated portfolio
2. Investors subscribing to the Scheme will be allotted units only in the main portfolio based on its NAV. In case ABSLTPL does not approve the above valuation process, all subscription and redemption applications will be processed based on the NAV of total portfolio.

Disclosure requirements

A statement of holding indicating the units held by the investors in the segregated portfolio along with the NAV of both segregated portfolio and main portfolio as on the day of the credit event will be communicated to the investors within 5 working days of creation of the segregated portfolio. Further, adequate disclosure of the segregated portfolio will also appear in all scheme related documents, in monthly and half-yearly portfolio disclosures and in the annual report of the mutual fund and the Scheme. Further, the NAV of the segregated portfolio will be declared on daily basis.

The information regarding number of segregated portfolios created in a scheme shall appear prominently under the name of the scheme at all relevant places such as SID, KIM-cum-Application Form, advertisement, AMC and AMFI websites, etc. The scheme performance required to be disclosed at various places will include the impact of creation of segregated portfolio. The scheme performance will clearly reflect the fall in NAV to the extent of the portfolio segregated due to the credit event and the said fall in NAV along with recovery (ies), if any, will be disclosed as a footnote to the scheme performance. These disclosures regarding the segregated portfolio will be carried out for a period of at least 3 years after the investments in segregated portfolio are fully recovered/ written-off.

The investors of the segregated portfolio will be duly informed of the recovery proceedings of the investments of the segregated portfolio and status update will be provided to the investors at the time of recovery and also at the time of writing-off of the segregated securities.

Total Expense Ratio ("TER") for the Segregated Portfolio

ABSLAMC will not charge investment and advisory fees on the segregated portfolio. However, TER (excluding the investment and advisory fees) can be charged, on a pro-rata basis only upon recovery of the investments in segregated portfolio. The TER so levied shall not exceed the simple average of such expenses (excluding the investment and advisory fees) charged on daily basis on the main portfolio (in % terms) during the period for which the segregated portfolio was in existence. The legal charges related t

recovery of the investments of the segregated portfolio will be charged to the segregated portfolio in proportion to the amount of recovery. However, the same will be within the maximum TER limit as applicable to the main portfolio. The legal charges in excess of the TER limits, if any, will be borne by ABSLAMC. The costs related to segregated portfolio will in no case be charged to the main portfolio.

Monitoring by Trustees

In order to ensure timely recovery of investments of the segregated portfolio, Trustees will ensure that, the ABSLAMC puts in sincere efforts to recover the investments of the segregated portfolio. Upon recovery of money, whether partial or full, it will be immediately distributed to the investors in proportion to their holding in the segregated portfolio. Any recovery of amount of the security in the segregated portfolio even after the write off shall be distributed to the investors of the segregated portfolio. Further, an Action Taken Report (ATR) on the efforts made by the ABSLAMC to recover the investments of the segregated portfolio will be placed in every Trustee meeting till the investments are fully recovered/ written-off.

The Trustees will monitor the compliance of this circular and disclose in the half-yearly trustee reports filed with SEBI, the compliance in respect of every segregated portfolio created.

In order to avoid mis-use of segregated portfolio, trustees will ensure that there is a mechanism in place to negatively impact the performance incentives of Fund Managers, Chief Investment Officers (CIOs), etc. involved in the investment process of securities under the segregated portfolio, mirroring the existing mechanism for performance incentives of the AMC, including claw back of such amount to the segregated portfolio of the scheme.

- a) Creation of segregated portfolio will be optional and at the discretion of ABSLAMC.

Illustration of portfolio segregation

The below illustration explains the impact of portfolio segregation on account of the credit event on the Scheme and its investors.

Total Portfolio	Regular Plan	Direct Plan
Net Assets (A)	200.00	110.00
Units (B)	20.000	10.000
NAV per unit (A)/(B)	10.0000	11.0000

Assuming, the above portfolio has a security with market value of Rs. 20 which has got impacted by a credit event. Based on Trustees approval for segregation of portfolio, total portfolio would be split into main portfolio and segregated portfolio as given below:

Main Portfolio	Regular Plan	Direct Plan
Net Assets before Segregation (A)	200.00	110.00
Value of impacted security (B)	12.90	7.10
Net Assets after segregation (C) = (A) – (B)	187.10	102.90
Units (D)	20.000	10.000
NAV per unit (C)/(D)	9.3548	10.2903

Segregated Portfolio	Regular Plan	Direct Plan
Value of impacted security segregated from Total portfolio	12.90	7.10
Haircut @ 25%	3.23	1.77
Net Assets after Haircut (A)	9.68	5.32
Units (B)	20.000	10.000
NAV per unit (A)/(B)	0.4839	0.5323

Investor Holding	Regular Plan	Direct Plan
Net Assets in Total Portfolio	200.00	110.00
Net Assets in Main Portfolio	187.10	102.90
Net Assets in Segregated Portfolio after Haircut*	9.68	5.32

*Market value of investor holding will come down to the extent of haircut on the impacted security.

Impact on investors:

1. Existing Investors: All existing investors in the scheme as on the day of the credit event will be allotted equal number of units in the segregated portfolio as held in the main portfolio.
2. New Investors: Investors subscribing to the scheme will be allotted units only in the main portfolio based on its NAV.

Exiting Investors: Investors redeeming their units will get redemption proceeds based on the NAV of main portfolio and will continue to hold the units of segregated portfolio.

Additional disclosures w.r.t. Investments in Securitised Debt:

1. How the risk profile of securitized debt fits into the risk appetite of the scheme

Securitized Debt is a financial instrument (bond) whose interest and principal payments are backed by an underlying cash flow from another asset. The asset may be either a loan to a single counterparty or a pool of loans. In this scheme the Fund manager ensures that as securitised debt instruments are relatively illiquid, the fund manager buys these with a view to hold them till maturity. Thus, in line with the investment strategy of the Scheme and considering that there would be no intermediate redemption pressures for the Fund Manager, the Scheme may take limited exposure to rated Securitized Debt. Credit assessment of the underlying asset or loans is done to evaluate if it meets internal norms set by the AMC.

Investment in these instruments will help the Scheme in aiming at reasonable returns. These returns come with a certain degree of risks which are covered separately in the Scheme Information Document. Accordingly, the risk profile of the securitised debt instruments matches that of the prospective investors of this Scheme and hence can be considered in the fund universe.

2. Policy relating to originators based on nature of originator, track record, NPAs, losses in earlier securitized debt, etc.

A securitization transaction involves sale of receivables by the originator (a bank, non-banking finance company, housing finance company, or a manufacturing/service company) to a Special Purpose Vehicle (SPV), typically set up in the form of a trust. Investors are issued rated Pass Through Certificates (PTCs), the proceeds of which are paid as consideration to the originator. In this manner, the originator, by selling his loan receivables to an SPV, receives consideration from investors much before the maturity of the underlying loans. Investors are paid from the collections of the underlying loans from borrowers. Typically, the transaction is provided with a limited amount of credit enhancement (as stipulated by the rating agency for a target rating), which provides protection to investors against defaults by the underlying borrowers. The scheme will invest in instruments of the originator only if the originator has an investment grade rating. Over and above the credit rating assigned by credit rating agencies to the originator, ABSLMF will conduct an additional evaluation on

- Previous track record on origination, servicing and performance of existing pools
- Willingness to pay, through credit enhancement facilities etc.
- Ability to pay
- Business risk assessment, wherein following factors are considered:

- Outlook for the economy (domestic and global)
- Outlook for the industry
- Originator/Pool specific factors

In addition a detailed review and assessment of rating rationale is done including interactions with the company as well as agency. For single loan PTC, credit evaluation of the underlying corporate will be carried out as with any other debt instruments.

3. Risk mitigation strategies for investments with each kind of originator

In terms of specific risks attached to securitization, each asset class would have different underlying risks, however, residential mortgages are supposed to be having lower default rates as an asset class. On the other hand, repossession and subsequent recovery of commercial vehicles and other auto assets is fairly easier and better compared to mortgages. Some of the asset classes such as personal loans, credit card receivables etc., being unsecured credits in nature, may witness higher default rates.

As regards corporate loans/receivables, depending upon the nature of the underlying security for the loan or the nature of the receivable the risks would correspondingly fluctuate. However, the credit enhancement stipulated by rating agencies for such asset class pools is typically much higher, which helps in making their overall risks comparable to other AAA rated asset classes.

The Scheme may invest in securitized debt assets. The asset may be either a loan to a single counterparty or a pool of loans. The Scheme intends to invest in securitized instruments rated by a SEBI recognized credit rating agency. In addition, some specific risk mitigation measures will include:

Limited Recourse and Credit Risk: Certificates issued on investment in securitized debt represent a beneficial interest in the underlying receivables and there is no obligation on the issuer, seller or the originator in that regard. Defaults on the underlying loan can adversely affect the pay outs to the investors (i.e. the Scheme) and thereby, adversely affect the NAV of the Scheme.

Risk Mitigation: In addition to careful scrutiny of credit profile of borrower/pool additional security in the form of adequate cash collaterals and other securities may be obtained to ensure that they all qualify for similar rating.

Bankruptcy Risk: If the originator of securitized debt instruments in which the Scheme invests is subject to bankruptcy proceedings and the court in such proceedings concludes that the sale of the assets from originator to the trust was not a 'true sale', and then the Scheme could experience losses or delays in the payments due.

Risk Mitigation: Normally, specific care is taken in structuring the securitization transaction so as to minimize the risk of the sale to the trust not being construed as a 'true sale'. It is also in the interest of the originator to demonstrate the transaction as a true sell to get the necessary revenue recognition and tax benefits.

Limited Liquidity and Price risk

Presently, secondary market for securitized papers is not very liquid. There is no assurance that a deep secondary market will develop for such securities. This could limit the ability of the investor to resell them. Even if a secondary market develops and sales were to take place, these secondary transactions may be at a discount to the initial issue price due to changes in the interest rate structure.

Risk Mitigation: Securitized debt instruments are relatively illiquid in the secondary market and hence they are generally held to maturity. The liquidity risk and HTM nature is taken into consideration at the time of analyzing the appropriateness of the securitization.

Risks due to possible prepayments: Weighted Tenor / Yield

Asset securitization is a process whereby commercial or consumer credits are packaged and sold in the form of financial instruments. Full prepayment of underlying loan contract may arise under any of the following circumstances;

- Obligor pays the Receivable due from him at any time prior to the scheduled maturity date of that Receivable; or
- Receivable is required to be repurchased by the Seller consequent to its inability to rectify a material misrepresentation with respect to that Receivable; or

- The Servicer recognizing a contract as a defaulted contract and hence repossessing the underlying Asset and selling the same
- In the event of prepayments, investors may be exposed to changes in tenor and yield.

Risk Mitigation: A certain amount of prepayments is assumed in the calculations at the time of purchase based on historical trends and estimates. Further a stress case estimate is calculated and additional margins are built in.

Bankruptcy of the Investor's Agent

If Investor's agent becomes subject to bankruptcy proceedings and the court in the bankruptcy proceedings concludes that the recourse of Investor's Agent to the assets/receivables is not in its capacity as agent/Trustee but in its personal capacity, then an Investor could experience losses or delays in the payments due under the swap agreement.

Risk Mitigation: All possible care is normally taken in structuring the transaction and drafting the underlying documents so as to provide that the assets/receivables if and when held by Investor's Agent is held as agent and in Trust for the Investors and shall not form part of the personal assets of Investor's Agent.

4. The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments

Framework that will be applied while evaluating investment decision relating to a pool securitization transaction:

Characteristics/Type of Pool	Mortgage Loan/ Loan Against Properties	Commercial Vehicle & Construction Equipment	Car	Two Wheeler	Micro Finance Pools	Personal Loans	Single Sell Downs	Others
Approx. Avg Maturity	60-180 Months	12-48 Months	12-48 Months	12-36 Months	12 Months	12-36 Months	NA	NA
Collateral Margin (incl. Cash, Guarantees, Excess Interest Spread, Subordinate Tranche)	5-20%	5-20%	5-20%	5-20%	5-30%	5-30%	NA	NA
Avg Loan to Value Ratio	< 90%	< 90%	< 90%	< 90%	NA	NA	NA	NA
Avg Seasoning of the Pool	6-12 Months	3-6 Months	3-6 Months	3-6 Months	3-12 Weeks	1-3 Months	0-3 Months	NA
Max. Single Exposure Range	3-5%	3-5%	Retail	Retail	Retail	Retail	NA	NA
Avg Single Exposure Range %	1-25%	1.5-2.5%	Retail	Retail	Retail	Retail	NA	NA

Information illustrated in the Table above, is based on the current scenario relating to Securitized Debt market and is subject to change depending upon the change in the related factors.

We endeavor to consider some of the important risk mitigating factors for securitized pool i.e.

- Average maturity of the pool: based on different asset classes and current market practices
- Collateral margin including cash collateral and other credit enhancements
- Loan to Value Ratio
- Average seasoning of the pool,
- Default rate distribution
- Geographical Distribution
- Maximum single exposure: Retail pools (passenger cars, 2-wheelers, Micro finance, personal loans, etc) are generally well diversified with maximum and average single exposure limits within 1%.

As illustrated above, these factors vary for different asset classes and would be based on interactions with each originator as well as the credit rating agency.

5. Minimum retention period of the debt by originator prior to securitization

The Mutual Fund will follow the guidelines on minimum holding period requirements as laid down by SEBI and RBI from time to time.

6. Minimum retention percentage by originator of debts to be securitized

We will follow the guidelines on minimum holding period requirements as laid down by SEBI and RBI from time to time.

7. The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund

Investments made by the scheme in any asset are done based on the requirements of the scheme and is in accordance with the investment policy. All Investments are made entirely at an arm's length basis with no consideration of any existing / consequent investments by any party related to the transaction (originator, issuer, borrower etc.). Investments made in Securitized debt are made as per the Investment pattern of the Scheme and are done after detailed analysis of the underlying asset. There might be instances of Originator /obligor investing in the same scheme but both the transactions are at arm's length and avoid any conflict of interest. In addition to internal controls in the fixed income investment process, there is regular monitoring by the compliance team, risk management group, and internal review teams. Normally the issuer who is securitizing instrument is in need of money and is unlikely to have long term surplus to invest in mutual fund scheme.

8. In general, the resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt

The risk assessment process for securitized debt, as detailed in the preceding paragraphs, is same as any other credit. The investments in securitized debt are done after appropriate research by credit analyst. The ratings are monitored for any movement. The entire securitized portfolio is published in the fact sheet and disclosed in the web site for public consumption with details of underlying exposure and originator.

Soft Dollar Arrangements

In this context ABSLAMC) / ABSLMF do not have any Soft-dollar arrangement with brokers. However, brokers do provide information-based services like free research reports etc. in the interest of taking better informed decisions for the benefit of investors. Also dedicated hotlines are set up by few brokers which are used for execution of trades. The hot lines aid execution of trades. - In case of demat accounts with nil balance and no transactions in securities and in mutual fund folios, the depository shall send account statement in terms of regulations applicable to the depositories.
- Consolidation shall be done on the basis of Permanent Account Number (PAN). In the event the folio / demat account has more than one registered holder, the first named Unit holder / Account holder shall receive the SCAS. For the purpose of SCAS, common investors across mutual funds / depositories shall be identified on the basis of PAN. Consolidation shall be based on the common sequence/ order of investors in various folios/ demat accounts across mutual funds / demat accounts across depository participants.
- In case of multiple accounts across two depositories, the depository with whom the demat account has been opened earlier will be the default depository which will consolidate the details across depositories and Mutual Fund investments and dispatch the SCAS to the unitholders.
- Unitholders whose folio(s)/demat account(s) are not updated with PAN shall not receive SCAS. Unitholders are therefore requested to ensure that their folio(s)/demat account(s) are updated with PAN.
- For Unitholders who have provided an e-mail address in KYC records, the SCAS will be sent by e-mail.
- The Unitholders may request for account statement for mutual fund units held in physical mode. In case of a specific request received from the Unitholders, account statement shall be provided to the unitholders within 5 business days from the receipt of such request.
- No account statements will be issued to unitholders opted to hold units in demat mode, since the statement of account furnished by depository participant periodically will contain the details of transactions.
- SCAS sent within the time frame mentioned above is provisional and is subject to realisation of payment instrument and/or verification of documents, including the application form
