Term of the Day

Primary Instrument

Definition: It is a type of financial instrument whose price is derived from its own market value or whose price is not derived from any other instrument. It simply means that the price of the primary instrument is directly determined by the market.

Explanation

Primary instruments include stocks, bonds, Certificate of Deposit (CD) and anything else that has its own value. In contrast to this, the price of derivative instruments, such as options, swaps and futures, is based on the value of their underlying assets like spot equity, currency, commodity and bonds. Hence, derivative products are known non-primary instruments.
